```
# Transcriptional regulatory network: conserved-overrepresented oligos for promoter regions of
# protein-coding and microRNA genes and their association to known transcription factors binding sites.

# Column 0 is the overrepresented DNA oligo S labeling the set. Columns 1 ... n are the Ensembl gene_id
# of the genes in whose promoter region the oligo S is overrepresented (p < 0.01). Only oligos surviving
# the conserved-overrepresentation test (BY < 0.1) are retained. For each oligos, we report also its
# association with known Trascription Factor Binding Sites, where possible. We divided the dataset according
# motif length, from 6 to 9 nt in this study. In this dataset are included both protein-coding genes
# as well as microRNA genes.

# At the end of each section, a validation with known TFBSs is reported, if possible.

# A plain text ASCII version of this file is available at: http://personalpages.to.infn.it/~cora/circuits/index.html
