Supplementary Table 1. 187 species scored for baubellum and baculum presence.

Column headers: ORDER, FAMILY, GENUS, SPECIES=taxonomic status of species scored; NAME_ON_PHYLOGENY=the species name on the phylogeny used; BAUBELLUM_PRESENT=whether baubellum was scored as present (YES), absent (NO), or Polymorphic; PERCENTAGE_WITH_BAUBELLUM=for Polymorphic species, how many individuals had a baubellum; BAUBELLUM_EVIDENCE=taxonomic level reported in the relevant publications; BAUBELLUM_BONE_PRESENT=whether individual baubella were bony, cartilaginous, or a mixture, both indicates different states between individual baubella; BAUBELLUM_FIGURE=whether or not baubellum was photographed or illustrated in publication; BAUBELLUM_MEASUREMENTS=whether quantitative measurements of the baubella were taken; MULTIPLE_BAUBELLA_MEASURED=whether more than one individual baubellum was measured; BAUBELLUM_DESCRIPTION=whether the baubellum was qualitatively described by relevant publication; BAUBELLUM_MUSEUM_SPECIMEN=whether evidence for the baubellum came from (unpublished) museum databases; BAUBELLUM_SOURCE=reference for baubellum data; BAUBELLUM_REMARKS=remarks about baubellum, usually related to taxonomic name revisions; BACULUM_PRESENT=whether baculum was present, absent, or polymorphic - generally taken from Schutz et al. 2017; MULTIPLE_BACULA_MEASURED=whether more than one individual baculum was measured; BACULUM_EVIDENCE=taxonomic level reported in the relevant publications; BACULUM_SOURCE=reference for baculum data; BACULUM_REMARKS=remarks about baculum, usually related to taxonomic name revisions.
