The authors wish to make the following corrections to this paper [1].

In the published version, the resection rate numbers as reported by Kok et al. [2] were cited incorrectly in the Introduction section on page 2.

The sentence “Among patients operated on for LRRC, R0 resection rate using surgical navigation was 21% compared with 51% in a case control group” should be changed to “Among patients operated on for LRRC, R0 resection rate using surgical navigation was 79% compared with 49% in a case control group”.

The authors state that the scientific conclusions are unaffected. This correction was approved by the Academic Editor. The original publication has also been updated.
