

Since January 2020 Elsevier has created a COVID-19 resource centre with free information in English and Mandarin on the novel coronavirus COVID-19. The COVID-19 resource centre is hosted on Elsevier Connect, the company's public news and information website.

Elsevier hereby grants permission to make all its COVID-19-related research that is available on the COVID-19 resource centre - including this research content - immediately available in PubMed Central and other publicly funded repositories, such as the WHO COVID database with rights for unrestricted research re-use and analyses in any form or by any means with acknowledgement of the original source. These permissions are granted for free by Elsevier for as long as the COVID-19 resource centre remains active.

## Corrigendum

## Corrigendum to “Persistence of immunogenicity after seven COVID-19 vaccines given as third dose boosters following two doses of ChAdOx1 nCov-19 or BNT162b2 in the UK: Three month analyses of the COV-BOOST trial” [J Infect 84(6) (2022) 795–813, 5511]

---

The authors regret that there has been an error published within Fig. 5 of this article. The authors inadvertently pasted the anti-spike plots for the "≥70 years" group instead of the pseudo-neutralising antibody plots (pages 808–809) to Fig. 5A and B. These plots replicate the "≥70 years" group in Fig. 4A and B on pages 806–807. The authors have confirmed that the error does not affect the

interpretation of the results and the rest of the paper, and the plots for the "<70 years" group in Fig. 5 are correct. The revised Fig. 5 contains the correct plots for pseudo-neutralising antibody data has now been updated in the original publication. The authors would like to apologise for any inconvenience caused.
