

Correction to: Management of Lung Cancer in the Patient with Interstitial Lung Disease

This is a correction to: Angela J Frank, Ibiayi Dagogo-Jack, Ioana A Dobre, Sarah Tait, Lana Schumacher, Florian J Fintelmann, Leah M Fingerma, Florence K Keane, Sydney B Montesi, Management of Lung Cancer in the Patient with Interstitial Lung Disease, *The Oncologist*, Volume 28, Issue 1, January 2023, Pages 12–22, <https://doi.org/10.1093/oncolo/oyac226>

In the originally published PDF version of this article, author Ibiayi Dagogo-Jack was incorrectly labelled as the corresponding author. The label should have been ‡ to indicate equal authorship with Angela J. Frank.

In addition to this, changes have been made to the order of references 3-5 to correspond accurately to their citation in text. In the text, the reference citations, each in the second paragraph of the Introduction have been changed as follows:

- At the end of the sentence “Percutaneous lung needle biopsy carries increased risks of complications in patients with IPF”, the reference has been changed from “3-5” to “3”.
- In the sentence that ends “...to include hyperoxia resulting in free radical formation and lung injury induced by mechanical ventilation”, the reference has been changed from “5” to “4”.
- In the sentence that ends “...also have increased risk for developing lung cancer treatment-related complications such as pneumonitis”, the reference has been changed from “3” to “5”.

These errors, for which the publisher apologizes, have been corrected online.
