(Molecular Therapy 24, 1456–1469; August 2016)

This article has been retracted at the request of the editor-in-chief. Similarities were found between images in this article and a previously published article in *Scientific Reports* (Zhang et al., 2015, Sci. Rep. 30, 17407, <https://doi.org/10.1038/srep17407>). Similarities were also found between images within this article. These concerns were initially reported in a PubPeer thread (<https://pubpeer.com/publications/11D757FEEACDC81ACAF60BD0A32607>). Image analysis performed by the editorial office confirmed findings of image reuse in Figures 2C and 5C of the *Molecular Therapy* article. In addition, some of the original data provided by the authors do not match the published article. This reuse (and in part misrepresentation) of data without appropriate attribution represents a severe abuse of the scientific publishing system. The authors disagree with this retraction and maintain that these mistakes do not alter the conclusions of the study.
