The authors regret a technical error in the graph-generating software resulted in an inaccurate visual representation for the moderate group in Figure 1. The bar graphs were not representative

of the actual data obtained in the moderate hemophilia group. The correct bar graphs for the moderate group should display a Median HJHS total score of 27.5 in those 30 to 40 years; 29.5 in those 41 to 50 years, and 29.0 in those > 50 years. This corrected figure does not alter the original data, analysis, or conclusions.

The authors would like to apologise for any inconvenience caused.
