

## CORRIGENDUM

# Green tea and coffee consumption is inversely associated with depressive symptoms in a Japanese working population – CORRIGENDUM

Ngoc Minh Pham, Akiko Nanri, Kayo Kurotani, Keisuke Kuwahara, Ayami Kume, Masao Sato, Hitomi Hayabuchi and Tetsuya Mizoue

First published online 9 July 2013

doi: 10.1017/S1368980013000360, published online by Cambridge University Press 4 March 2013

The authors would like to amend an incorrect figure given in table 1: Participants' characteristics according to green tea and coffee consumption: men and women ( $n$  537) aged 20–68 years from two workplaces in north-eastern Kyushu, Japan, 2009

In the column Green tea consumption:  $\geq 4$  cups/d ( $n$  97). The % value for Physical activity ( $\geq 5$  MET-h/week)§ should be corrected to 37.1 rather than 3.0
