

CORRIGENDUM

Genes & Development 30: 266–280 (2016)

Corrigendum: The evolutionary turnover of recombination hot spots contributes to speciation in mice

Fatima Smagulova, Kevin Brick, Yongmei Pu, R. Daniel Camerini-Otero, and Galina V. Petukhova

In the above-mentioned article, the CASTf × 13Rm data set that is presented originated from the wrong mouse strain, likely due to a mix-up during mouse husbandry or at the time of tissue collection. This error does not affect the conclusions of the study, and the correct CAST × 13R data set is now available in GEO under accession number GSE75419. All other strains and hybrids used in this study have been verified to be of the correct genetic backgrounds. The CASTf × 13Rm data have been removed from the article online, and the multistrain comparisons in Figures 2A, 4A, and 5; Supplemental Figures S5A, S9, S12, and S17A; and Supplemental Tables S4 and S5 have been revised in the article online and in the Supplemental Material to omit these data. The authors thank Dr. Julien Joseph and Dr. Laurent Duret for alerting them to this error.
