The Journal Editors and Sage Publications want to issue a note regarding the following article:

Mohan N, O'Connor L, Douglas H, Banerjee A, Nelson-Piercy C, Klein JL. Streptococcus oralis meningitis in pregnancy. *Obstetric Medicine*. 2022;0(0). doi:10.1177/1753495X221118168

The Journal Editors and Sage want to make readers aware of a case report based on the same patient published in the journal *Anaesthesia Reports*:

Wydall, S., Durrant, F., Scott, J. and Cheesman, K. Streptococcus oralis endocarditis leading to central nervous system infection in pregnancy. *Anaesthesia Reports*. 2021; 9(e12133). <https://doi.org/10.1002/anr3.12133>

The institution at which the patient received their clinical care has confirmed the legitimacy of both reports, which were written from different perspectives.

This Editors' Note supersedes the information provided in the Expression of Concern placed here on 13 November 2022.
