Errata

In: Glantz SA, Smith LRA. The effect of ordinances requiring smoke-free restaurants on restaurant sales. *Am J Public Health*. 1994;84:1081–1085.

In the last paragraph of the Methods section, the statement “The variance inflation factors were always well below 2” should have read “The variance inflation factors were always well below 4.”

In: Byers T, Mullis R, Anderson J, et al. The costs and effects of a nutritional education program following work-site cholesterol screening. *Am J Public Health*. 1995;85:650–655.

Because of an SAS default setting, the two *P* values in Table 3 were computed with error terms for individuals instead of worksites. The correct *P* values are .03, not .02, for the 3.8% cholesterol reduction among men at 12 months and .21, not < .01, for the 3.5% cholesterol reduction in the combined group at 12 months. All the treatment effects are correct as reported.

In: Himmelstein DU, Lewontin JP, Woolhandler S. Who administers? Who cares? Medical administrative and clinical employment in the United States and Canada. *Am J Public Health*. 1996;86:172–178.

In the “1993” column of Table 1, the entry for “Health aides and assistants” should have been 1775, not 1755, and that for “Professional and technical, except health” 171, not 287. The errors do not affect any of the calculated percentages reported.

In: Rush D, Welch K. The first year of hyperinflation in the former Soviet Union: nutritional deprivation among elderly pensioners, 1992. *Am J Public Health*. 1996;86:361–367.

In the first paragraph of the Methods section, the definition of body mass index should have read “(weight in kilograms divided by height in meters squared).” All the data reported were calculated on the basis of the correct definition.
