

ERRATUM

Re: Volume 4, Number 1. In the article entitled "Amplitude-Induction Gradient of a Small Human Operant in an Escape-Avoidance Situation," by Ralph F. Hefferline and Brian Keenan, the fifth paragraph down on page 43 was printed incorrectly. This paragraph should read as follows:

When the subject was asked later to state what he had done to obtain reinforcement, his report suggested superstitious behavior based on knowledge of electrode placement: one on each hand and ankle and one on an earlobe. He professed to have discovered an effective response sequence, which consisted of subtle rowing movements with both hands, infinitesimal wriggles of both ankles, a slight displacement of the jaw to the left, breathing out—and then waiting.
