R.G. DiScipio, P.J. Daffern, M. Kawahara, R. Pike, J. Travis & T.E. Hugli (1996) Cleavage of human complement component C5 by cysteine proteinases from *Porphyromonas (Bacteroides) gingivalis*. Prior oxidation of C5 augments proteinase digestion of C5. *Immunology*, **87**, 660–667.

The authors of the paper have requested that the following statement should be published in the journal.

This is to acknowledge that Dr Jan Potempa was a co-author of the manuscript entitled 'Cleavage of human complement component C5 by cysteine proteinases from *Porphyromonas (Bacteroides) gingivalis*. Prior oxidation of C5 augments proteinase digestion of C5'. Dr Potempa made significant and critical contributions to this study and must be recognized for his efforts. His name was inadvertently deleted from the list of authors during revision of the manuscript and this most serious omission was not detected during proofing. We apologize to Dr Potempa for the oversight and I take full responsibility for this error. This is to recognize that Dr Potempa (Department of Microbiology and Immunology, Institute of Molecular Biology, Jagiellonian University, A1 Mickiewicza 3, 31-120 Krakow, Poland) has full rights to claim co-authorship of this publication. This statement of acknowledgment will accompany all reprints of this report.
