DISCUSSION

DR. TRUMAN G. BLOCKER, JR. (Galveston): After a great deal of thought, I have come to the conclusion that the burn toxin is like the flying saucer: Some have never seen it, but have an open mind about it; some have thought they have

seen it but later are not sure or prove to be mistaken; some have never seen it and would not believe it if they did see it; and some have seen it for themselves and even if they were proven to be wrong, could never be convinced otherwise. I hope I stand in the open-minded group.
