## CORRECTION.

In our paper on hæmochromogen (*This Journal*, 60. p. 62, 1925) we incorrectly stated that Willstätter and his co-workers had shown purified pepsin and trypsin to be identical. What Willstätter, Waldschmidt-Leitz, and Memmer did prove in the article to which we referred (*Ztschr. physiol. Chem.* 125. p. 93, 1923) was that the activity of the pancreatic lipase at various hydrogen ion concentrations is dependent on the "Begleitstoffe" present.
