In This Issue

Dr. Kramer presents findings of his study of the specific strains of E. coli isolated from cases of edema disease of swine in Western Canada on page 289

The etiology of foetal abnormalities in animals or birds remains an obscure though challenging problem. Bohuon reviews the literature on chondrodystrophy and describes the experimental production of this monstrosity in embryonated eggs on page 295

The use of the complement-fixation test in the diagnosis of virus diseases affecting the central nervous system is reviewed by Dr. Christine Rice on page 301

Differential diagnosis of diseases of the thorax is of great importance to the small animal practitioner. The first part of a two-installment paper on this subject by I. M. Lauder and D. D. Lawson appears in this issue on page 306

Erratum

R. A. Huebner, V.M.D., was one of the authors of the paper, "Parenteral Benzathine Penicillin V in Bovine Mastitis", an abstract of which appeared on page 262 of the August issue of this journal — not R. A. Huchmer as shown.
