

## Erratum

**Genes & Development 16:** 1815–1827 (2002)

### ***C. elegans* EOR-1/PLZF and EOR-2 positively regulate Ras and Wnt signaling and function redundantly with LIN-25 and the SUR-2 Mediator component**

Robyn M. Howard and Meera V. Sundaram

Due to a production error, the origin of the *eor-1* and *eor-2* gene names was printed without proper attribution. The *eor* genes have been independently identified by multiple groups, and eor stands for egl-1 suppressor (M. Hengartner, pers. comm.)/plasmid DiQ uptake defective (M. Herman, pers. comm.)/raf enhancer (our work). We apologize for the oversight.
