Journal of Physiology **532**, 385–397 (2001)

In the printed version, on page 385, depolarisation and were omitted from the third line of point 3 of the Summary.

Point 3 should have appeared as:

3. When a train of action potential-like depolarisations of different frequencies (50, 100, 200 Hz) was used to induce inactivation, a similar relationship was found between the frequency of depolarisation and both $\tau_{\text{slow},1}$ and $\tau_{\text{slow},2}$ ($a = 0.58$ s, $b = 0.39$ for $\tau_{\text{slow},1}$ and $a = 3.77$ s and $b = 0.42$ for $\tau_{\text{slow},2}$).
