In Vitro Analysis of Transneuronal Spread of an Alphaherpesvirus Infection in Peripheral Nervous System Neurons

B. Feierbach, M. Bisher, J. Goodhouse, and L. W. Enquist

Department of Molecular Biology, Princeton, New Jersey 08544, and Lewis-Sigler Institute for Integrative Genomics, Princeton, New Jersey 08544

Volume 81, no. 13, p. 6846–6857, 2007. Page 6848, Fig. 1B: The label for the left panel should read “NonP-Neurofilament H,” and the right panel should read “P-Neurofilament H.”

Page 6848, legend to Fig. 1: The two sentences beginning on line 6 and ending on line 11 should read “Shown are confocal microscopy images of dissociated SCG neurons inside the ring fixed and stained for nonphosphorylated (NonP) neurofilament H (left panel) and phosphorylated (P) neurofilament H (right panel). In mature neurons, nonphosphorylated neurofilament H is restricted to the cell body and phosphorylated neurofilament H is restricted to axons.”
