

Erratum

Role of high risk-human papilloma virus test in the follow-up of patients who underwent conization of the cervix for cervical intraepithelial neoplasia

[*J Gynecol Oncol* 2009;20:86-90]

The original article by Park JY et al. entitled, "Role of high risk-human papilloma virus test in the follow-up of patients who underwent conization of the cervix for cervical intraepithelial neoplasia" (*J Gynecol Oncol* 2009;20:86-90) contained an error. In Table 2, the mean time interval from conization to HR-HPV test reported by Houfflin (the third line) was mistakenly described as 6 weeks, which should have been 3 months.
