

Correction. In the article "Elevated *c-myc* protooncogene expression in autosomal recessive polycystic kidney disease," by Benjamin D. Cowley, Jr., Fred L. Smardo, Jr., Jared J. Grantham, and James P. Calvet, which appeared in number 23, December 1987, of *Proc. Natl. Acad. Sci. USA* (84, 8394–8398), an incorrect copy of Fig. 5 was printed. The correct figure and its legend are shown below.

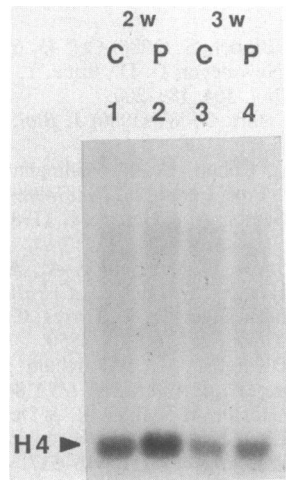

FIG. 5. Expression of histone H4 mRNA in ARPKD. Samples (5 μ g) of total RNA from 2- (2w) and 3-week-old (3w) control (C) and polycystic (P) mice. Samples in lanes 1 and 2 and in lanes 3 and 4 represent normal and cystic littermates, respectively. RNAs were electrophoresed and hybridized as described in Fig. 2. In this experiment (and in others), there was a <2-fold difference in histone H4 mRNA levels between normal and cystic mice at ages 2 and 3 weeks.
