### Abstract

Gene silencing by aberrant epigenetic chromatin alteration is a well-recognized event contributing to tumorigenesis. While genetically engineered tumor-prone mouse models have proven a powerful tool in understanding many aspects of carcinogenesis, to date few studies have focused on epigenetic alterations in mouse tumors. To uncover epigenetically silenced tumor suppressor genes (TSGs) in mouse mammary tumor cells, we conducted initial genome-wide screening by combining the treatment of cultured cells with the DNA demethylating drug 5-aza-2'-deoxycytidine (5-azadC) and the histone deacetylase inhibitor trichostatin A (TSA) with expression microarray. By conducting this initial screen on EMT6 cells and applying protein function and genomic structure criteria to genes identified as upregulated in response to 5-azadC/TSA, we were able to identify 2 characterized breast cancer TSGs (*Timp3* and *Rprm*) and 4 putative TSGs (*Atp1B2*, *Dusp2*, *FoxJ1* and *Smpd3*) silenced in this line. By testing a panel of ten mouse mammary tumor lines, we determined that each of these genes is commonly hypermethylated, albeit with varying frequency. Furthermore, by examining a panel of human breast tumor lines and primary tumors we observed that the human orthologs of *ATP1B2*, *FOXJ1* and *SMPD3* are aberrantly hypermethylated in the human disease while *DUSP2* was not hypermethylated in primary breast tumors. Finally, we examined hypermethylation of several genes targeted for epigenetic silencing in human breast tumors in our panel of ten mouse mammary tumor lines. We observed that the orthologs of *Cdh1*, *RarB*, *Gstp1*, *RassF1* genes were hypermethylated, while neither *Dapk1* nor *Wif1* were aberrantly methylated in this panel of mouse tumor lines. From this study, we conclude that there is significant, but not absolute, overlap in the epigenome of human and mouse mammary tumors.

### INTRODUCTION

Tumorigenesis is a multi-step process stemming from increased oncogene activity in concert with constrained tumor suppressor gene (TSG) activity (Weinberg 1996). Such disease-producing changes in cellular phenotype result from dysregulation of gene expression and/or protein function attributable to genetic and/or epigenetic changes within the genome.

Several well-studied TSGs and other growth regulatory genes undergo de novo hypermethylation and consequential transcriptional silencing in human cancer cells. Aberrant cytosine methylation leading to gene silencing occurs at discreet, clustered 5'-

CG-3' dinucleotides (referred to as CpG islands) within the genome (Bird 1992). This cancer-associated CpG methylation is part of a complex set of epigenetic events that transform chromatin from a transcriptionally-active to an inactive state (Wolffe 2001) and epigenetic gene silencing is now widely recognized as either a causative or correlative event in tumor development (Jones and Baylin 2002; Robertson 2005) and is now widely regarded as one of the ‘hits’ in the Knudsen hypothesis leading to TSG inactivation (Jones and Laird 1999).

In recent years, numerous laboratories have developed tumor-prone mouse models owing to engineered over-expression of oncogenes or lost TSG expression. Clearly, these models have provided a powerful tool in studying tumorigenesis and unique insight into the molecular mechanisms that give rise to cancer in humans. For example, *BRCA1*, a TSG associated with breast and ovarian tumors in humans (Bishop 1999; Struewing et al., 1997), when conditionally deleted within the mammary epithelium of p53 heterozygous mice greatly increases mammary tumor incidence (Xu et al., 1999). This observation lends strong evidence as to the role *BRCA1* plays in breast tumor suppression.

What remains less explored is the role that epigenetics plays during tumorigenesis in mice. While it seems straightforward to presume that gene silencing occurs in a parallel fashion in both human and mouse tumors, mice have not been widely utilized as a platform for either the discovery of epigenetically silenced genes or to study the role that gene silencing plays in the process of tumorigenesis. In one of the few studies to utilize a tumor-prone model system to dissect epigenetic events during disease progression, Yu et al (2005a) used Restriction Landmark Genomic Scanning (RLGS) to investigate aberrant DNA methylation events in a mouse model of T/natural killer acute lymphoblastic leukemia. These investigators observed nonrandom, aberrant DNA methylation occurring during tumorigenesis but was not present in benign preleukemic cells. Further, the inhibitor of DNA binding 4 (*Idb4*) gene was identified as a putative TSG silenced via promoter hypermethylation in mouse, and this gene was found epigenetically silenced in human leukemia as well. Similarly, Costello and colleagues found that *SLC5A8*, which encodes a sodium monocarboxylate cotransporter, was epigenetically silenced in both mouse and human brain tumors (Hong et al., 2005). These studies underscore the high potential of mice as a model system to understand the epigenetic basis of cancer and, potentially, other diseases as well.

A list of well-characterized TSG including *BRCA1*, *CDKN2A*, *SFN*, *CDH1*, and *CST6* are targets for epigenetic silencing in breast cancer (Dobrovic and Simpfendorfer 1997; Esteller et al., 2000; Ferguson et al., 2000; Nass et al., 2000; Holst et al., 2003; Ai et al., 2006). However, at present, we are unaware of any genes that have been identified as targets for epigenetic silencing in mouse mammary tumors. To initially address this question, we conducted a screen for epigenetically silenced genes in a mouse mammary tumor line using an approach termed “pharmacological unmasking” (Esteller 2007). This often used approach examines changes in gene expression in response to the global DNA demethylating drug 5-aza-2'-deoxycytidine (5-azadC) and the histone deacetylase (HDAC) inhibitor trichostatin A (TSA) via microarray. Our screen was conducted using a mouse mammary cell line and identified ~1,000 genes that were upregulated ≥ 5-fold in response to 5-azadC/TSA in this line. Based on gene function and genomic architecture in mouse and man, several candidates identified in the initial screen were selected for further study.

## MATERIALS and METHODS

### Cell Culture and Drug Treatment

Mouse mammary tumor lines 410.4, 410 and 66.1 were obtained from Dr. A. Fulton (University of Maryland, Baltimore, MD), D2F2 and 4T1 from Dr. F. Miller (Karamanos Cancer Foundation, Detroit, MI), LM2 and LM3 from Dr. E. Bal de Kier Joffé (Universidad de Buenos Aires, Argentina) and D1K2 and NeuT from Dr. B. Law (University of Florida, Gainesville, FL). The mouse mammary tumor line EMT6 was purchased from American Type Culture Collection (ATCC, Manassas, VA).

LM2 and LM3 were grown in Eagle's MEM with 2 mM L-glutamine, 1.5g/L sodium bicarbonate, 0.1 mmol/L nonessential amino acids, and 1.0 mmol/L sodium pyruvate. 4T1 were cultured in RPMI 1640 with 2 mmol/L L-glutamine, 1.5 g/L sodium bicarbonate, 4.5 g/L glucose, 10 mmol/L HEPES, and 1.0 mmol/L sodium pyruvate. 410, 410.4, 66.1, NeuT, D2F2, and D1K2 were maintained in DMEM with 2mM L-glutamine, 0.1 mmol/L nonessential amino acids. EMT6 was cultured in Waymouth's MB 752/1 medium with 2mM L-glutamine. All cell lines were maintained in medium supplemented with 10% (v/v) heat-inactivated fetal bovine serum (Invitrogen, Carlsbad, CA) at 37°C in 5% CO<sub>2</sub> humidified atmosphere. Human breast tumor cell lines were cultured as previously outlined (Ai et al., 2006).

Where indicated, cell lines were treated with 5 µM 5-azadC for 5 days (fresh drug was added every 24 hours) followed by a 24-hour treatment with 100 nM TSA. All drugs were purchased from Sigma.

### Human Breast Tumor Specimens

Fifteen fresh-frozen archival breast tumors were obtained from the University of Florida Shands Cancer Center Molecular Tissue Bank. All specimens and pertinent patient information were treated in accordance with policies of the institutional review board (IRB) of the University of Florida Health Sciences Center. Tumors analyzed in this study were examined by a surgical pathologist and identified as invasive breast adenocarcinoma (stage II or III). Where indicated, matched normal breast tissue was obtained from disease-free surgical margin.

### Microarray Analysis

Total RNA was extracted from EMT6 cells either untreated or treated with the global DNA demethylating agent 5-aza-2'-deoxycytidine (5-azadC) and the histone deacetylase inhibitor (HDAC) TSA. The quantity and purity of the extracted RNA was evaluated using a Nanodrop ND-100 spectrophotometer (Nanodrop Technologies, Wilmington, DE) and its integrity measured using an Agilent Bioanalyzer. Five hundred nanograms (500 ng) of total RNA was amplified and labeled with a fluorescent dye (Cy3) using a Low RNA Input Linear Amplification Labeling kit (Agilent Technologies, Palo Alto, CA). Abundance and quality fluorescently labeled cRNA was also assessed using a Nanodrop ND-1000 spectrophotometer and an Agilent Bioanalyzer. The labeled cRNA (1.65 µg) was hybridized to an Agilent Mouse Whole Genome Oligo Microarray (Agilent Technologies, Inc., Palo Alto, CA) for 17 hrs prior to washing and scanning. Data was extracted from scanned images using Agilent's Feature Extraction Software.

### Gene Expression Analysis by RT-PCR

RT-PCR was carried out according to established protocols (Ai et al., 2006). Briefly, untreated and 5-azadC/TSA treated mouse mammary tumor cells were homogenized in Trizol (Invitrogen), and total RNA purified according to the manufacturer's instructions.

First-strand cDNA synthesis was carried out using SuperScript III reverse transcriptase (Invitrogen). Subsequently, this cDNA was used in PCR reactions using *Timp3*, *Rprm*, *Smpd3*, *Atp1B2*, *Dusp2* and *FoxJ1*-specific oligonucleotide primers as listed in Supplemental Table I. Mouse glyceraldehyde-3-phosphate dehydrogenase (*Gapdh*) served as a control to assure equivalent RNA in each reaction. Following PCR, reactions were analyzed by electrophoresis on 10% polyacrylamide gels followed by staining with ethidium bromide.

### Extraction and Sodium Bisulfite Modification of Genomic DNA

Genomic DNA (gDNA) was isolated from human breast tumor tissue samples and cultured human and mouse cell lines using a Qiagen Blood and Cell Culture DNA kit (Qiagen, Inc., Valencia, VA) and stored at -20°C before use. DNA was modified with EZ DNA Methylation kit (ZYMO Research Co., Orange, CA) according to the manufacturer's instructions. Briefly, ~1.0 µg denatured gDNA was treated with sodium bisulfite at 50°C for ~16 hours in the dark. Following this, samples were applied to supplied columns, desulfonation conducted, and DNA was subsequently eluted in a volume of 20 µL with supplied elution buffer. One µL of bisulfite-converted gDNA solution was generally used in subsequent PCR reactions.

### Methylation Specific-PCR

Primers used for Methylation Specific-PCR (MSP) analyses are listed in Supplemental Table II. MSP reactions were conducted using Qiagen HotStarTaq DNA polymerase and supplied 1X PCR buffer supplemented with 0.1 mmol/L dNTPs, 2.5 mmol/L MgCl<sub>2</sub>, and 0.5 µmol/L each of forward and reverse primers and bisulfite-converted gDNA. Following thermocycling, PCR products were loaded 10% polyacrylamide gels and visualized using ethidium bromide.

Human placental gDNA (Biochain Institute, Hayward, CA) and mouse gDNA isolated from tail snips of wildtype C57BL/6 mice were used in primer validation experiments of human and mouse MSP, respectively and where indicated DNA was methylated *in vitro* using *SssI* methylase (NEB, Ipswich, MA) as outlined previously (Vo et al., 2004).

### Pyrosequencing

PCR reactions were conducted on bisulfite-converted gDNA as described above. Supplemental Table III summarizes pyrosequencing primers and sequence analyzed in each gene. Following PCR amplification using a biotinylated reverse primer, 5–20 µL of PCR product was mixed with 2 µL of streptavidin-coated sepharose beads (GE Healthcare Bio-Sciences AB, Uppsala, Sweden), 40µl of binding buffer (10 mM Tris-HCl, 2 M NaCl, 1mM EDTA, 0.1% Tween 20, pH 7.6), and brought up to 80 µL total volume with dH<sub>2</sub>O. This mixture was immobilized on streptavidin beads by shaking constantly at 1400 rpm for 10 minutes at RT. The beads were subsequently harvested using a vacuum preparation workstation and appropriate sequencing primer added to a final concentration of 330 nM. The sequencing primers were subsequently annealed to the template by incubating the samples at 80°C for 2 min and cooled at RT for 10 min prior to analysis. Pyrosequencing was conducted using a PyroMark MD system (Biotage AP, Uppsala, Sweden), and sequence analysis conducted using supplied software.

## RESULTS

The focus of this investigation was to compare mouse and human mammary cancer for potential overlap in tumor epigenotype across these two species. Our screening strategy entailed utilizing the mouse mammary tumor line EMT6 in a pharmacological unmasking

screen (Esteller 2007). Briefly, EMT6 cells were treated with the global DNA demethylating agent 5-aza-2'-deoxycytidine (5-azadC) and the histone deacetylase (HDAC) inhibitor trichostatin A (TSA) to de-repress epigenetically silenced genes. After drug treatment, which was found to have minimal toxicity in EMT6 cells by MTT assay (data not shown), total RNA was harvested from two replicate cultures of drug treated and untreated EMT6 cells and used to probe Agilent Mouse Whole Genome microarrays.

Of the ~44,000 transcripts measured on these microarrays, an average of 54% were detected as significantly above background levels in each of the hybridizations (range: 51 to 57%). The intensity values from the replicate samples for both the treated and untreated cultures had Pearson correlation values greater than 0.97, suggesting that the reproducibility of the results was very high. Reproducibility of the within-group samples, along with the differences between the two groups, were also apparent when the z-score transformed intensity values for the 2,252 transcripts found to be differentially expressed (984 upregulated, 1,268 downregulated) using an absolute fold change criterion of 5-fold and a log ratio p-value of 0.001 were compared (Fig 1).

### **Identification of candidate epigenetically silenced genes in the EMT6 mouse mammary tumor cell line**

Following the initial screen by expression microarray, we established a series of bioinformatic criteria to narrow our search for epigenetically silenced tumor suppressor genes (TSGs) in the EMT6 cell line. From the entire list of genes measured by the microarray, we first excluded genes that showed a moderate change in expression in response to 5-azadC/TSA. Therefore, we required that a candidate gene demonstrate at least a 5-fold increase with a log ratio p-value of 0.001 to be considered further. This narrowed our focus to 984 genes of interest (Fig 2). (A listing of all 984 genes identified is given in Supplemental Table IV.)

Next, we used protein function and genomic structure criteria to further define potential TSGs that are targets for epigenetic silencing in EMT6 cells. We were principally interested in studying genes that encode proteins with an established tumor suppressor activity(ies), or a function consistent with tumor suppressive activity. Specifically, we included in our study gene products where previously published studies support a gene function that either antagonizes cell growth, activates apoptosis or suppresses anti-apoptotic processes, restrains cellular invasiveness, or inhibits angiogenic processes.

We next excluded from the list of putative/characterized TSGs those genes that do not possess a canonical CpG island within 5' flanking region in both the human and mouse orthologs using the UC Santa Cruz genome browser (<http://genome.ucsc.edu>) to investigate genomic architecture of various candidate genes. We used the algorithm within the UCSC genome browser that scores the presence of CpG islands in genomic DNA using criteria originally established by Gardiner-Garden and Frommer (Gardiner-Garden and Frommer 1987). Our rationale for establishing these criteria is that genes which possess both features (*i.e.*, putative TSG activity and the presence of a CpG island that overlaps the translational start site of the gene) are likely to identify high-value candidate targets for epigenetic silencing. Of the 984 genes initially identified as being upregulated  $\geq 5$ -fold in our expression microarray screen, this bioinformatic investigation identified 37 genes meeting the outlined criteria (see Supplemental Table V). Of this, 26 genes were further investigated in this study.

Our next test was to confirm 5-azadC/TSA-induced upregulation of gene expression by RT-PCR. This revealed 12 genes where the gene upregulation detected by microarray was confirmed by RT-PCR and 14 genes whose upregulation could not be independently

confirmed using an independent set of RNA samples isolated from drug treated/untreated EMT6 cells. Methylation-Specific PCR (MSP), a common methodology to examine DNA methylation (Herman et al., 1996), was subsequently used to judge methylation within the CpG islands associated with remaining 12 candidate genes. This analysis revealed that six genes exhibited no methylation as judged by MSP. This may indicate that the 5-azadC/TSA-induced increase in expression of these genes is indirect in nature and/or that silencing of these genes is controlled by chromatin modifications other than CpG methylation (e.g., transcriptionally-repressive histone modifications). The later of these possibilities is quite possible since our drug treatment regimen included the histone deacetylase inhibitor TSA. As a result of these efforts our focus narrowed to six genes: Tissue Inhibitor of Metalloproteinase 3 (*Tim3*), TP53-dependent G2 Arrest Mediator Candidate also termed Reprimo (*Rprm*), Sphingomyelin Phosphodiesterase 3 Neutral (*Smpd3*), ATPase, Na<sup>+</sup>/K<sup>+</sup> Transporting, Beta 2 Polypeptide (*Atp1B2*), Dual-Specificity Phosphatase 2 (*Dusp2*), and ForkheadboxJ1 (*FoxJ1*).

### Silencing of *Tim3* and *Rprm* in mouse mammary tumor cell lines

*Tim3* and *Rprm* are well-characterized TSGs silenced in human breast cancer (Bachman et al., 1999; Takahashi et al., 2005). To test how commonly these genes are epigenetically silenced in mouse mammary tumor lines, we acquired 9 distinct cultured mouse mammary tumor lines (designated 410.4, 410, LM3, LM2, D1K2, NeuT, D2F2, 66.1 and 4T1), in addition to the EMT6 cell line. As outlined above, RT-PCR was used to confirm increased expression in response to 5-azadC/TSA; however, due to high-levels of toxicity to this drug cocktail, we found that only four of these cell lines (EMT6, 410.4, 410, and LM3) showed sufficiently low toxicity (>75% viability 48 hrs after 5 μM 5-azadC treatment) to be appropriate subjects for this experiment. These lines were cultured in the presence or absence of 5-azadC and TSA, total RNA harvested and subsequently cDNA synthesized. Results of this RT-PCR experiment clearly indicated that the abundance of *Tim3* and *Rprm* transcripts increased substantially following treatment of each line with 5-azadC/TSA (Fig 3A). Parallel reactions using primers specific for the mouse form of *Gapdh* confirmed equivalent RNA abundance in each PCR reaction.

We next investigated the methylation status of *Tim3* and *Rprm* in our full panel of mouse mammary tumor line by designing MSP primers using a publically available on-line primer design program ([www.mspprimer.org/cgi-mspprimer/design.cgi](http://www.mspprimer.org/cgi-mspprimer/design.cgi)). All primer sets designed for the analysis for DNA methylation status (both MSP and pyrosequencing analysis) were designed to assay DNA methylation at, or in close proximity to, the transcriptional start site (TSS) of candidate genes since this region is most likely to have undergone dense methylation during the process of epigenetic silencing (Bird 2002; Jones and Baylin 2002).

Primers were designed specific for both the mouse *Tim3* and *Rprm* genes and validated using mouse genomic DNA extracted from tail clippings of C57BL/6 mice. This mouse genomic DNA was either methylated *in vitro* with *SssI* methylase or not methylated prior to bisulfite conversion. MSP reactions conducted using this control DNA indicated that our designed primers discriminate between the *Tim3* and *Rprm* genes in either a methylated or unmethylated state (Fig 3B). Subsequently, these MSP primer sets were used to probe the methylation status of the *Tim3* and *Rprm* gene in our panel of 10 mouse mammary tumor cell lines (Fig 3C). With the exception of D2F2, a methylated-specific (M) amplicon was detected when the *Tim3* gene was analyzed using bisulfite-converted genomic DNA isolated from each cell line. While amplification of both unmethylated and methylated-specific MSP products is a common finding in MSP analysis (Herman et al., 1996), potentially attributable to heterogeneous promoter methylation within the tumor cell population, this result indicates the presence of methylated CpG within the *Tim3* gene in at

least a subset of cells of each line except D2F2 where the *Tim3* promoter appears to be unmethylated.

As an independent means of quantitatively analyzing DNA methylation, we conducted pyrosequencing on mouse *Tim3* and *Rprm* genes in the EMT6 and LM3 cell lines. Pyrosequencing, like MSP, analyzes bisulfite-converted genomic DNA as a template for PCR; however, pyrosequencing is conducted on PCR products amplified using primers that do not contain internal CpG dinucleotides. Thus, amplification occurs in a manner that is unbiased by DNA methylation status. Subsequently, methylation at distinct CpGs can be determined quantitatively in a pool of genomic DNA (Colella et al., 2003; Tost et al., 2003).

The primer design developed for the mouse *Tim3* gene allowed for analysis of 9 CpG dinucleotides within a ~45 bp portion of the CpG island associated with this gene. Pyrosequencing analysis, consistent with MSP results, indicated that *Tim3* was methylated in both EMT6 and LM3 cell lines. Moreover, all the CpG dinucleotides investigated using this approach displayed methylation suggesting a high level of methylation density, although CpG methylation was not uniform over the region interrogated. The average CpG methylation measured in this region was 79% in EMT6 and 76% in LM3 (Fig 3D). The pyrosequencing protocol developed for *Rprm* analyzed 6 CpG dinucleotides over a ~35 bp region of the CpG island within this gene. Similar to *Tim3* analysis, all CpG within this region of the *Rprm* gene exhibit significant methylation with average CpG methylation of 84% and 86% in EMT6 and LM3 cells, respectively (Fig 3E).

Pyrosequencing analysis was also conducted on control (mouse tail) DNA samples (Fig 3D,E). For both *Tim3* and *Rprm* genes, average CpG methylation measured was 7%, indicating very low levels of DNA methylation in this control DNA sample. This result indicates that methylation of the CpG islands associated with the *Tim3* and *Rprm* genes in the mouse genome is a tumor-associated event. Moreover, when our DNA methylation analysis is combined with the results of our RT-PCR experiments using the DNA demethylating agent 5-azadC, we conclude that the *Tim3* and *Rprm* genes are targeted for epigenetic silencing in mouse mammary tumor lines through aberrant gene methylation. Considering most of the 10 distinct cell lines display this feature, silencing of these genes is apparently a common event in cultured mouse mammary tumor cells. Since both *Tim3* and *Rprm* are also targets for epigenetic silencing in human breast tumor line and primary tumors, these results reinforce the validity of our expression microarray screen for epigenetically silenced genes in mouse mammary tumor lines and establish a point of epigenetic overlap between mouse and human mammary gland tumors.

### **The Atp1B2, Smpd3, Dusp2 and FoxJ1 genes are targets for epigenetic silencing in mouse mammary tumor cell lines**

In addition to *Tim3* and *Rprm*, our screen identified four genes (*Atp1B2*, *Smpd3*, *Dusp2* and *FoxJ1*) that were strong candidates for epigenetic silencing in the EMT6 line. RT-PCR was conducted on EMT6, 410.4, 410, and LM3 cells cultured in the presence or absence of 5-azadC/TSA using primers designed specifically for the mouse orthologs of these genes. RT-PCR analysis of the *Atp1B2* transcript in EMT6 cells showed a clear upregulation of this transcript in response to 5-azadC/TSA (Fig 4A). Conversely, 410.4 and LM3 cells displayed no detectable upregulation of *Atp1B2* expression and analysis of 410 cells showed a slight (~2-fold) increase in *Atp1B2* expression following 5-azadC/TSA treatment. RT-PCR results showed strong upregulation of *Dusp2* expression in 5-azadC/TSA treated EMT6, 410 and 410.4 cells while LM3 cells showed no increased expression of this gene in drug treated LM3 cells. *Smpd3* showed marked increases in gene expression in each cell line in response to 5-azadC/TSA. Similarly, *FoxJ1* showed clear upregulation in drug treated EMT6 and

LM3 cells while expression was more modestly increased in drug treated 410 and 410.4 cells.

Based on the positive RT-PCR results outlined above, we designed MSP primers for the mouse forms of the *Atp1B2*, *Smpd3*, *Dusp2* and *FoxJ1* genes. As shown (Fig 4B), validation experiments using *in vitro* methylated/unmethylated mouse genomic DNA confirmed that MSP primer sets were capable of determining the methylation state of each gene. In EMT6 and 410 cells, MSP analysis of the *Atp1B2* gene indicated abundant M-specific amplicon indicating that this gene is hypermethylated in these cell lines. This result is consistent with the increased expression of this gene observed in RT-PCR experiments. In 410.4 cells, slight amplification of the M-specific band was noted and no M-specific amplicon was detected when genomic DNA isolated from LM3 cells was assayed, indicating that methylation of this gene is not a prominent feature in this cell line. MSP analysis of the other lines in our panel of mouse mammary tumor cells indicated that only 66.1 cells display prominent amplification of the M-specific product from the *Atp1B2* gene. Reduced amplification of the M-specific product was observed in 4T1 and D2F2 cells while no M-specific product was obtained from the other 3 lines (LM2, D1K2 and NeuT) in our panel.

MSP analysis of the *Dusp2* gene in EMT6, 410.4 and 410 cells indicated strong amplification of the M-specific product (Fig 4C). When combined with the clear upregulation of the *Dusp2* transcript when each of these lines were treated with 5-azadC/TSA, this result indicates that this gene is epigenetically silenced in these lines. Conversely, no aberrant methylation of the *Dusp2* gene in LM3 cells was observed. In the remaining six lines in our panel, methylation of the *Dusp2* gene was observed in D1K2, NeuT and 66.1 cells and no M-specific amplicon was observed when LM2, D2F2 and 4T1 cells were assayed by MSP.

When the *Smpd3* gene was analyzed by MSP, methylation of this gene was observed in all of the cell lines in our panel with the exception of NeuT and D2F2 (Fig 4C). Since we observed upregulation of the *Smpd3* in each of the four cell lines treated with 5-azadC/TSA, MSP results are consistent with epigenetic silencing of the *Smpd3* gene in cultured mammary tumor lines. Similarly, all ten cultured mammary tumor lines displayed methylation of the *FoxJ1* gene as judged by MSP. Again, this is consistent with our observation of increased *FoxJ1* expression in 5-azadC/TSA treated cells and indicates that the *FoxJ1* is commonly targeted for epigenetic silencing in cultured mouse mammary tumor lines. In sum, these lines of experimentation indicate that the *Atp1B2*, *Dusp2*, *Smpd3* and *FoxJ1* genes are epigenetically silenced in mouse mammary tumor lines; however, the occurrence of these aberrant events is variable within this panel of cultured lines.

### **Analysis of ATP1B2, DUSP2, SMPD3 and FOXJ1 hypermethylation in human breast cancer lines and primary breast tumors**

The *ATP1B2*, *DUSP2*, *SMPD3* and *FOXJ1* genes have not previously been characterized as targets for epigenetic silencing in human breast tumors. Thus, we examined the methylation status of each of these genes in a panel of eight cultured human breast cancer cell lines by designing MSP primer sets for the human ortholog of each gene. Validation experiments using *in vitro* methylated/unmethylated human placental genomic DNA indicated that each of these primer sets can discriminate between methylated and unmethylated forms of these four genes (Fig 5A). MSP analysis of the *ATP1B2* gene in our panel of human breast tumor lines indicated robust amplification of the methylation-specific product in MCF-7, MDA-MB-435 and BT-474 cells while MDA-MB-468 cells show moderate accumulation of the M amplicon and low level amplification of the M product was observed in MDA-MB-231. Other lines in our panel (T-47D, BT-549 and SKBR3) displayed no evidence of *ATP1B2* methylation. MSP analysis of the *SMPD3* gene determined that MDA-MB-231, MDA-

MB-435 and BT-474 cells display methylation of this gene, while the other cell lines show no evidence of *SMPD3* methylation. Similarly, *DUSP2* was found to be methylated in MCF7, MDA-MB-231 and BT-549 cells but not in T-47D, MDA-MB-468, SKBR3, MDA-MB-435 and BT-474 cells. Finally, MSP analysis of the *FOXJ1* gene indicates strong amplification of the M-specific amplicon in MDA-MB-231, MDA-MB-435 and BT-474 cells. Weak amplification of the M-specific *FOXJ1* amplicon was observed in MCF-7, MDA-MB-468 and BT-549. No amplification of the *FOXJ1* M-specific product was observed in either T-47D or SKBR3 cells.

To confirm the MSP results obtained when the methylation status of the *ATP1B2*, *DUSP2*, *SMPD3* and *FOXJ1* genes was scored by MSP, we conducted pyrosequencing. The pyrosequencing assay developed for the human *ATP1B2* gene scores methylation of seven CpG dinucleotides within a ~30 nt region of the CpG island within the 5' end of the human *ATP1B2* gene. When genomic DNA harvested from MCF-7 cells was analyzed by pyrosequencing, we observed low (3%) to moderate (29%) levels of CpG methylation within this cell line in the *ATP1B2* gene (Fig 5C). Overall, average CpG methylation measured within the *ATP1B2* gene was 17% in this cell line. In BT-474 cells, we observed markedly higher methylation within the *ATP1B2* gene with average CpG methylation of 34%. Pyrosequencing of control (human placental) DNA showed a low level of CpG methylation (4.6%) in this gene.

Pyrosequencing analysis of the *SMPD3* gene showed high average levels of CpG methylation (56% and 71%) within the *SMPD3* gene in MDA-MB-231 and BT-474 cells, respectively (Fig 5D). Conversely, low levels of CpG methylation (0.8%) of the *SMPD3* gene was measured in control DNA. Consistent with MSP results, we observed methylation of the CpG island associated with the human *DUSP2* gene in MDA-MB-231 (88%) and BT-549 (44%) cells with low (5.5%) CpG methylation measured in control DNA (Fig 5E). We also observed CpG methylation within the human *FOXJ1* gene in MDA-MB-231 (40%) and BT-474 (63%) cells and control DNA displayed low (5.5%) CpG methylation within *FOXJ1* (Fig 5F). Taken together, both MSP and pyrosequencing analyses indicate that the *ATP1B2*, *DUSP2*, *SMPD3* and *FOXJ1* are aberrantly methylated, albeit at differing frequencies, in cultured human breast tumor lines.

Next, we conducted MSP analysis to examine *ATP1B2*, *DUSP2*, *SMPD3* and *FOXJ1* gene methylation in primary breast tumor/normal mammary tissue samples. Fifteen frozen human breast tumors were obtained and patient-matched disease-free breast tissue were obtained with two of these tumor samples (Tumor72 and Tumor75). Genomic DNA was isolated, bisulfite modified, and used in MSP reactions with primers specific for the *ATP1B2*, *DUSP2*, *SMPD3* and *FOXJ1* genes. In all normal breast tissue samples, we observed exclusive amplification of the unmethylated-specific (U) amplicon, indicating that these genes are not methylated in normal mammary tissue (Fig 6A). When patient-matched breast tumor samples were analyzed by MSP, we observed methylation of the *SMPD3* gene in both Tumor72 and Tumor75. Further, methylation of the *FOXJ1* gene was observed in Tumor72. No methylation of either *DUSP2* or *ATP1B2* was observed in either Tumor72 or Tumor75.

Figure 6B shows a representative subset of additional breast tumors analyzed by MSP. We observed methylation of the *SMPD3* gene in Tumor 62, 66 and 70. Overall, we observed *SMPD3* methylation in 60% of breast tumors investigated (9 out of 15). We observed methylation of the *ATP1B2* gene in Tumor 61, 68 and 70 and, overall, detected a 20% rate (3/15) of *ATP1B2* methylation in breast tumors. In contrast, *FOXJ1* was found to be commonly methylated in human breast tumors; specifically, we observed that 11 out of 15 tumors surveyed (73%) displayed aberrant *FOXJ1* methylation as scored by MSP. Taken

together, MSP analysis suggests that promoter hypermethylation of the *ATP1B2*, *SMPD3* and *FOXJ1* occur in primary human breast tumors with varying occurrence.

Despite the fact that we documented hypermethylation of *DUSP2* in cultured human breast cancer lines, this gene was found to be unmethylated in all human breast tumors examined (Fig 6B). *DUSP2* encodes a phosphatase (also known as PAC1) that dephosphorylates and inactivates mitogen-activated protein (MAP) kinases (Chu et al., 1996) and is a transcriptional target of p53 in signalling apoptosis (Yin et al., 2003). These properties make this gene an excellent candidate TSG and *DUSP2* hypermethylation has been reported in prostate cancer (Yu et al., 2005b). However, we did not observe methylation of this gene in primary tumors leading us to conclude that epigenetic silencing of *DUSP2* in human breast cancer is likely a rare event.

### **Analysis of methylation status of characterized targets for epigenetic silencing in human breast tumors in cultured mouse mammary tumor lines**

Finally, we determined the methylation status of well-defined TSGs known to be targets for epigenetic silencing in human breast cancer in our panel of cultured mouse mammary tumor lines. We designed MSP primer sets to assay methylation within the CpG islands associated with the mouse orthologs of the *Cdh1*, *RarB*, *Gstpl*, *Dapk1*, *RassF1* and *Wifl* genes. Validation experiments using *in vitro* methylated/unmethylated mouse genomic DNA indicate that each of these primer sets can delineate gene methylation status (Fig 7A).

Our MSP analyses indicate that *RassF1* and *RarB* were commonly methylated in our panel of mouse mammary tumor lines with 90% and 80% showing significant methylation, respectively (Fig 7B). In contrast, methylation of *Cdh1* and *Gstpl* were far less commonly encountered in this panel of cell lines with 30% and 10%, respectively, displaying methylation of these genes. In all mouse mammary cell lines, we observed exclusive amplification of the unmethylated-specific products for *Dapk1* and *Wifl* genes indicating that neither gene is methylated in this panel of mouse cell lines.

## **DISCUSSION**

### **Comparative epigenomics of mouse and human mammary tumors**

By coupling genome-wide screening with bioinformatics analyses and inspection of publicly available mouse and human genome sequence, we were able to characterize 6 candidate genes as targets for epigenetic silencing in the EMT6 line. These genes are: *Timp3*, *Rprm*, *Smpd3*, *Dusp2*, *Atp1B2*, and *FoxJ1*. Of these, *Timp3* and *Rprm* have already been characterized as TSGs and targets for epigenetic silencing in human breast and other tumor types (Esteller et al., 2001; Takahashi et al., 2005; Kim et al., 2006;). The fact that our initial screening identified these TSGs as silencing candidates in EMT6 underscores the successful nature of our initial screen. Moreover, since analysis of 10 distinct mouse mammary tumor lines shows that both *Timp3* and *Rprm* are commonly silenced in cell lines of this type, we conclude that both human and mouse mammary tumors share silencing of these tumor suppressor genes in common.

A combination of RT-PCR and MSP confirmed that *Smpd3*, *Dusp2*, *Atp1B2*, and *FoxJ1* are silenced in mouse mammary tumor lines. Our findings indicate that *Atp1B2* is a target, although likely an uncommon one, for silencing in mouse mammary cell lines. The other 3 genes identified in our screen appear to be more commonly hypermethylated in mouse mammary tumor lines. We observed significant amplification of the M-specific amplicon specific for *Dusp2* in 60% of the cell lines tested, *Smpd3* in 80%, and *FoxJ1* in 100%. When a panel of eight human breast tumor cell lines were assayed for methylation by pyrosequencing and/or MSP, we observed substantial methylation of the *ATP1B2* gene in

50% (4/8) cell lines assayed. Also, *SMPD3*, *DUSP2*, and *FOXJ1* methylation was detected in 38% (3/8) of the cell lines surveyed. Of note, methylation of each of these genes, with the exception of *DUSP2*, was observed in human primary breast tumors and MSP analysis of normal breast tissue showed methylation of these genes to be a disease-associated event. The fact that *DUSP2* methylation was observed in cultured human cell lines but not primary tumors strongly suggests that silencing of this gene is likely a rare event in human breast tumors.

As part of our study we also examined the methylation status of 6 genes known to be targets of epigenetic silencing in human breast tumors in our panel of cultured mouse mammary tumor lines. In this investigation the mouse ortholog of the *Cdh1*, *Gstpl*, *RarB*, *Wifl*, *Rassf1*, and *Dapk1* genes were assayed by MSP. We observed, to various extents, that *Cdh1*, *Gstpl*, *RarB*, and *Rassf1* were hypermethylated in our panel of mouse tumor lines. However, we obtained no evidence that either the *Wifl* or *Dapk1* genes are aberrantly methylated in any of these lines.

When the results of our studies on various epigenetically silenced genes in human and mouse cultured mammary tumor cell lines and human primary breast tumors are considered collectively, we conclude that there is significant overlap in the mammary tumor cell epigenome between these two species. Of the twelve genes studied, only *Wifl* and *Dapk1* were found not to be silenced in both species. While *Dusp2* was found to be commonly hypermethylated in mouse cell lines, methylation of this gene was less commonly observed in cultured human lines and no evidence for hypermethylation was observed in primary human breast tumors. These results indicate that some genes targeted for epigenetic silencing in human breast tumors are also aberrantly methylated in mouse mammary tumor lines demonstrating considerable but not absolute overlap in the mammary tumor epigenome between these two species.

### **SMPD3, ATP1B2 and FOXJ1 as novel targets for epigenetic silencing in human breast cancer**

Sphingomyelinases (SMases) belong to a multigene family of phosphodiesterases. Each of the three well-characterized SMases (*SMPD1*, *SMPD2*, and *SMPD3*) hydrolyze sphingomyelin to ceramide and phosphocholine. The acid sphingomyelinase *SMPD1* is located in the endolysosomal compartment, while the neutral SMases (nSMases) *SMPD2* and *SMPD3* are located within the endoplasmic reticulum membranes and in the Golgi apparatus, respectively (Stoffel et al., 2007). nSMases are a major intracellular regulator of ceramide, a bioactive lipid.

Several lines of evidence support the view that the ability of nSMases contribute to proliferation of cancer cells and/or to their invasiveness. Of note, the *SMPD3* locus is present, as well as six members of the cadherin family, with chromosome 16q22.1, and genetic alterations in this region have been implicated in the progression of various cancers, notably breast cancer (Chalmers et al., 2001; Driouch et al., 1997). Moreover, it has recently been shown that reduction of ceramide levels due to inhibition of nSMase in Hs578T breast adenocarcinoma cells overexpressing caveolin-1 results in a significant enhancement in Akt activation a well-characterized pro-growth, pro-survival mechanism (Wu et al., 2007). Ample evidence also supports a role for ceramide in the activation of apoptosis. For example, Luberto et al (2002) showed inhibition of TNF- $\alpha$ -induced cell death in MCF7 cells using a novel inhibitor of nSMase activity. Data obtained in this study indicates that ceramide induces conformational changes in Bax and activates mitochondrial phosphatase 2A, which, in turn, dephosphorylates Bcl-2. These two events clearly link ceramide and nSMases to the activation of cell death. Similarly, studies link ceramide to the regulation of

cell cycle progression by inducing growth arrest by promoting dephosphorylation of the Rb tumor suppressor (Alesse et al., 1998).

In this report, we show that the *SMPD3* gene in both mouse and man is a target for epigenetic silencing in mammary tumors. To our knowledge, this is the first report of the *SMPD3* gene being targeted for silencing during tumorigenesis. Functionally, this aberrant event will result in decreased ceramide production in response to normal physiological cues promoting dysregulation of both cellular death and growth programs. Thus, this event has clear implications in the process of breast tumorigenesis.

The protein encoded by *ATP1B2* is a member of the Na<sup>+</sup>/K<sup>+</sup> ATPase beta chain protein family. Na<sup>+</sup>/K<sup>+</sup> ATPases, which are composed of two subunits (a large catalytic subunit (alpha) and a smaller glycoprotein subunit (beta)), are integral membrane proteins responsible for establishing and maintaining the electrochemical gradients of Na<sup>+</sup> and K<sup>+</sup> ions across the plasma membrane. This process is essential for osmoregulation, for sodium-coupled transport of a variety of organic and inorganic molecules, and for electrical excitability of nerve and muscle (Dobretsov and Stimers 2005).

The adhesion molecule on glia (AMOG) protein was originally identified as a neural cell adhesion molecule and controls neuron–astrocyte adhesion as well as neural cell migration *in vitro* (Antonicek et al., 1987), was later found to be encoded by the *ATP1B2* gene (Gloor et al., 1990). Others (van den Boom et al., 2006) recently showed that the *ATP1B2* gene was targeted for epigenetic silencing via aberrant gene methylation in malignant glioma cells. This finding, supported by the observation that reduced ATP1B2 expression is associated with increased tumor grade (Senner et al., 2003), led these investigators to propose that *ATP1B2* silencing could be a significant event in glioma development. Our results indicate that *Atp1B2* is epigenetically silenced in a subset of cell lines in our panel of mouse mammary tumor lines and its human ortholog is subject to gene hypermethylation in both human breast tumor cell lines and primary tumors. Given the role that this gene product plays in controlling glial migration, these findings suggest that silencing of *ATP1B2* may influence breast tumor cell migration as well. This compelling notion requires further investigation.

FOXJ1 is a member of the fork head gene family of transcription factors originally identified in *Drosophila*, and a large family of FOX genes are currently characterized in humans (Katoh 2004). In mammalian cells, FOXJ1 has been shown to suppress NFκB transcriptional activity *in vitro* and suppress inflammation *in vivo* (Lin et al., 2004). While NFκB is a key regulator of immune response, dysregulation of NFκB often drives deregulated growth, resistance to apoptosis, and increased metastatic potential (Lu and Stark 2004). Since FOXJ1 functions as an antagonist to NFκB activity it is reasonable to suggest that this molecule functions as a TSG, and others have commented that FOXJ1 is an excellent candidate for anti-cancer therapy (Chen 2004). While the role of FOXJ1 in cancer suppression remains to be explored, our finding that this gene is a common target for aberrant hypermethylation in both cultured cells and primary tumors strongly suggests that FOXJ1 silencing is potentially an important event in breast tumorigenesis.

In conclusion, our study has documented considerable, but not absolute, overlap exists between the epigenome of mouse and human mammary tumors. This finding supports the possible utility of using mouse as a model system to understand early epigenetic events during tumorigenesis as well as the general impact of aberrant chromatin remodeling events in cancer. Moreover, our study revealed several putative TSG that are novel targets for epigenetic silencing in human breast cancer.

## Acknowledgments

The authors would like to thank Drs. Lingbao Ai and Wan-Ju Kim for technical assistance and advise during the completion of this study and Dr. Martha Campbell-Thompson for supplying breast tumors.

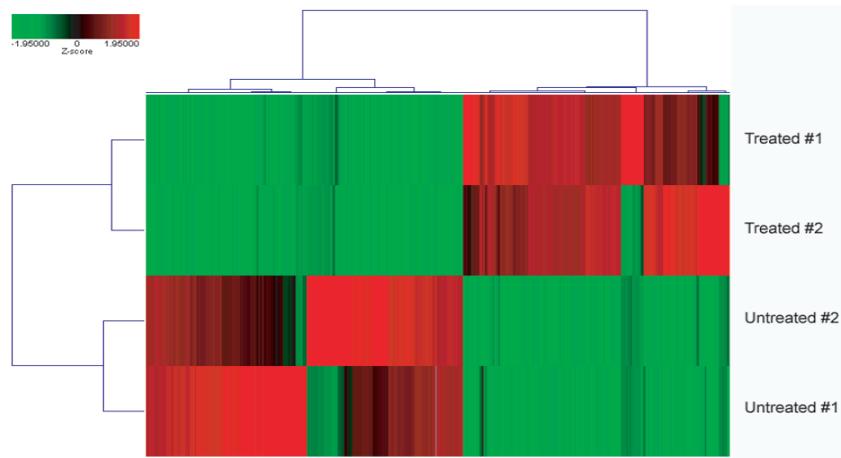

Supported, in part, by a grant from the NIH (R21 CA102220) to KDB.

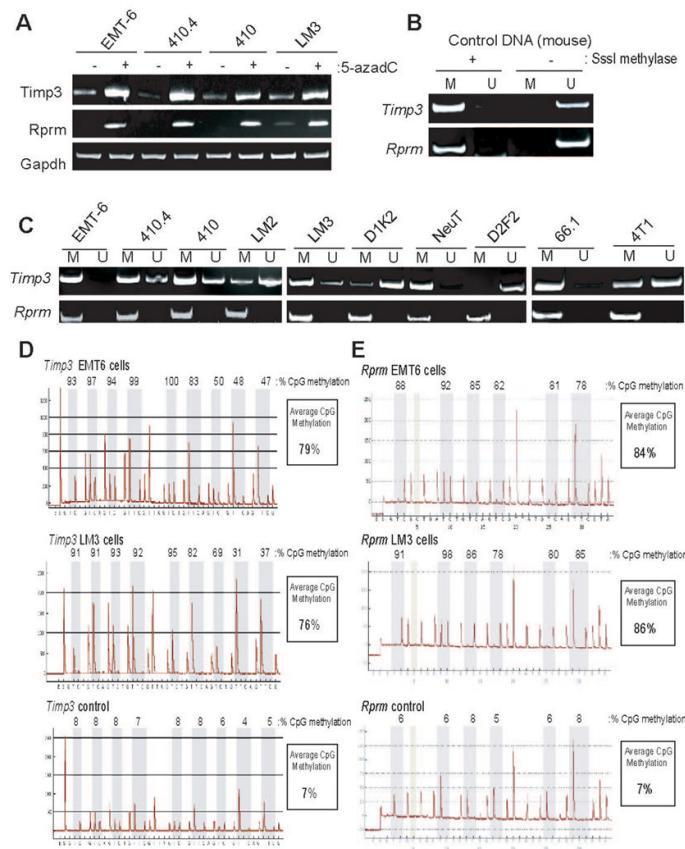

**Figure 1. Hierarchical clustering of the differentially expressed transcripts in all of the biological replicate samples**

Two-way hierarchical clustering using Ward's Minimum Variance as the heuristic criteria and Euclidean distance as the similarity metric was performed on all 4 samples using the z-score transformed expression values for the 2,339 transcripts that were identified as differentially expressed (fold-change > 5, log ratio p-value < 0.001) when the two groups were compared to each other (984 genes displayed increased expression, 1,355 displayed decreased expression in response to 5-azadC/TSA). The degree of relatedness between each sample is represented by the dendrogram (hierarchical tree) presented in this figure, wherein the height of each branch represents the distance between the 2 objects being connected. The relationship between the color intensity and the expression level is illustrated by the color bar.

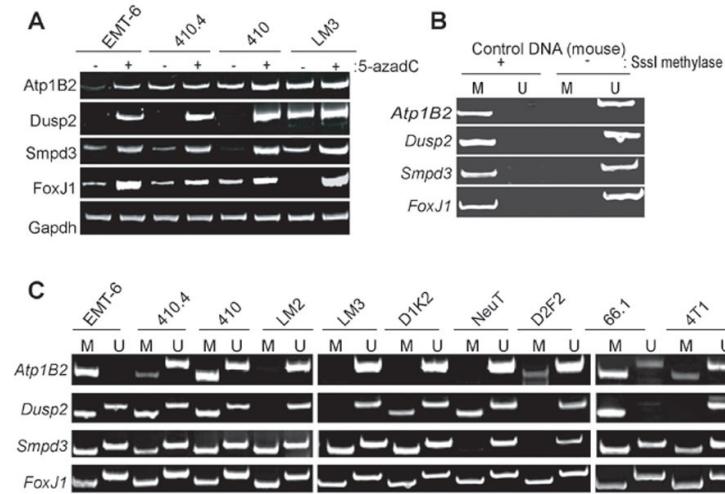

**Figure 2.**

Flow chart summarizing various experimental steps used following initial microarray screen for epigenetically silenced genes in the EMT6 cell line.

**Figure 3. Analysis of Timp3 and Rprm silencing in cultured mouse mammary tumor cell lines**

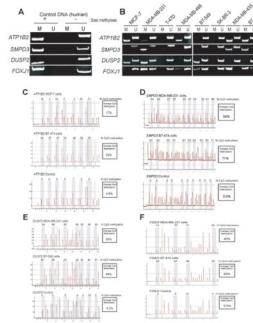

**A** Indicated mouse mammary tumor lines were either treated or not with a combination of 5-azadC and TSA. Subsequently, total RNA was harvested, cDNA synthesis performed, and PCR reactions conducted using primers specific for the *Timp3* (top) or *Rprm* (middle) genes. Also, PCR reactions using primers specific for the *Gapdh* gene (bottom) were conducted to assure equivalent RNA abundance in each reaction. **B.** MSP primers were designed specific to the mouse *Timp3* (top) and *Rprm* (bottom) genes. Primers designed to amplify methylated (M) or unmethylated (U) regions of the CpG island associated with each gene were tested in PCR reactions using mouse genomic DNA either incubated in the presence or absence of *SssI* methylase prior to bisulfite conversion. **C.** Genomic DNA harvested from mouse mammary tumor lines EMT6, 410.4, 410, LM3, LM2, NeuT, D2F2, 66.1, 4T1, D1K2 were bisulfite converted and used in MSP reactions with methylated-specific (M) or unmethylated-specific (U) primers. **D.** Pyrosequencing analysis was conducted on the *Timp3* gene using bisulfite-modified genomic DNA from EMT6 and LM3 tumor lines, and mouse genomic DNA as a control. Shown are obtained pyrograms, measured methylation at CpG dinucleotides within the gene region analyzed, and the average CpG methylation within this region of the *Timp3* gene. **E.** Pyrosequencing analysis of the *Rprm* gene was conducted on EMT6 and LM3 lines and mouse genomic DNA as outlined in D.

**Figure 4. Analysis of Atp1B2, Dusp2, Smpd3 and FoxJ1 silencing in mouse mammary tumor lines**

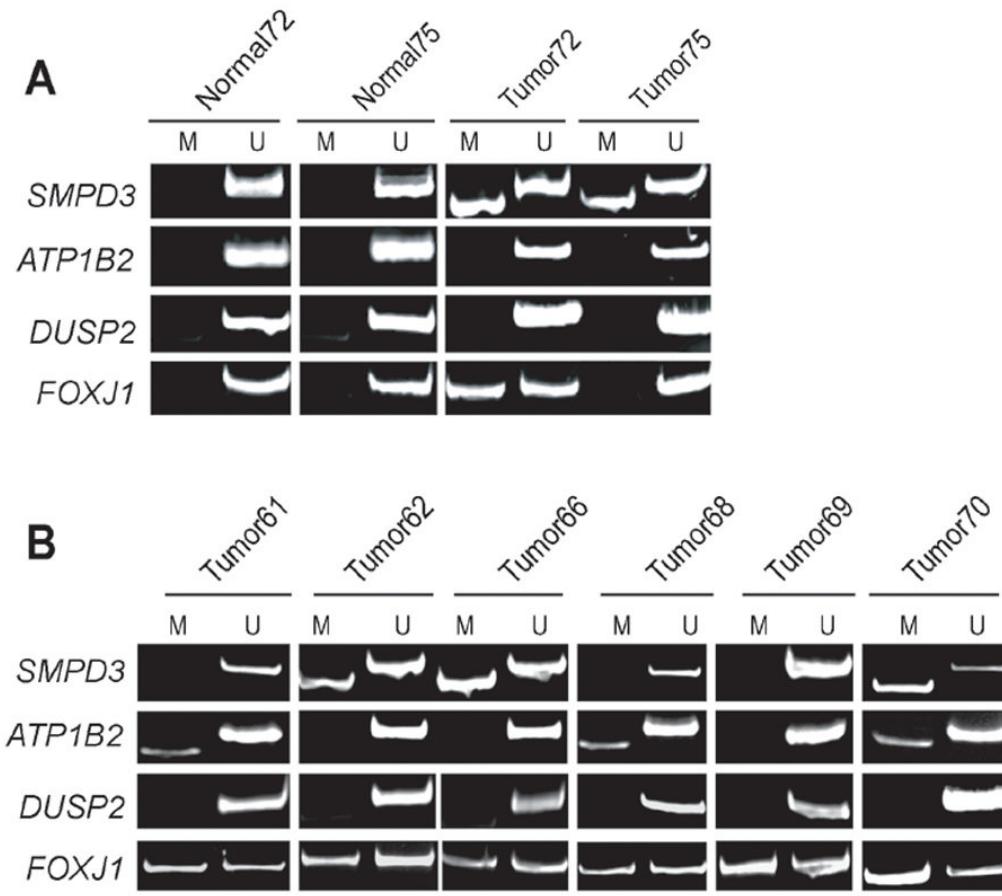

**A** RT-PCR was conducted on cDNA synthesized from indicated mouse mammary tumor lines treated and untreated with 5-azadC/TSA using primers specific for each indicated gene.

**B.** MSP primers specific for each gene were designed and subsequently validated using bisulfite-modified mouse genomic DNA either methylated or not prior to bisulfite conversion. **C.** MSP analysis of these four genes using DNA harvested from the indicated mouse mammary cell lines was conducted.

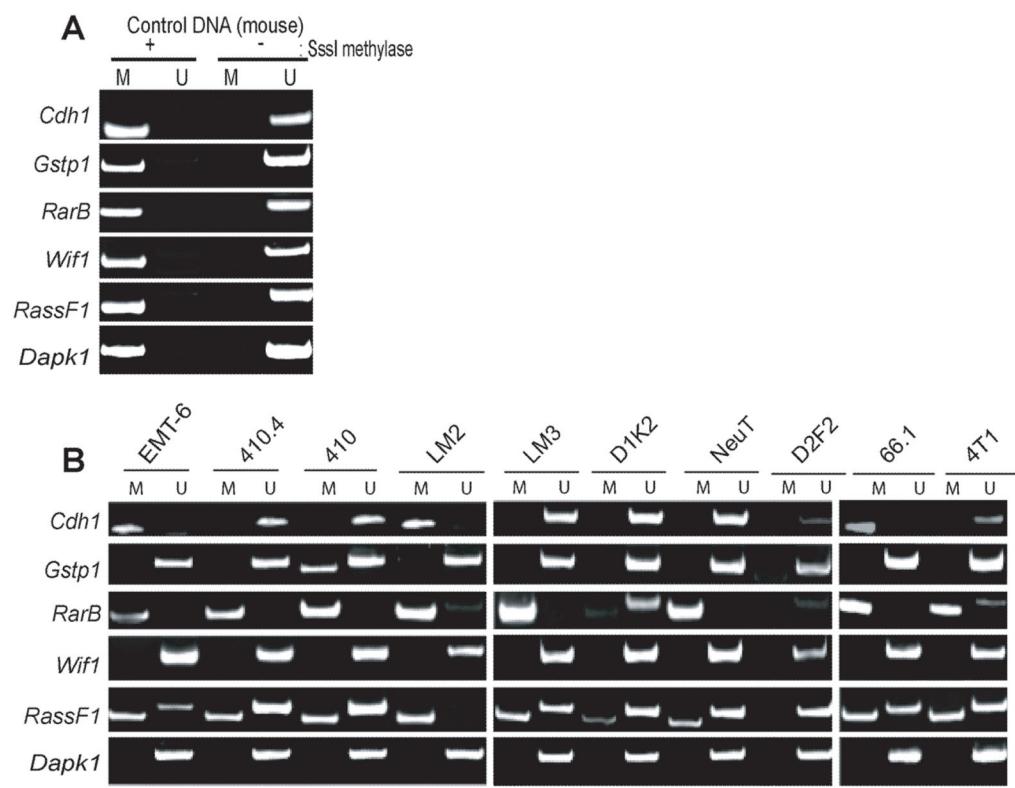

**Figure 5. Analysis of ATP1B2, DUSP2, SMPD3 and FOXJ1 methylation in human breast tumor cell lines**

A MSP primers were designed to the human ortholog of each indicated gene and validated using human placental DNA that was incubated in the presence or absence of *SssI* methylase prior to bisulfite conversion. **B.** MSP analysis of indicated genes was conducted on indicated human breast tumor cell lines. **C.** Pyrosequencing analysis of the *ATP1B2* gene was conducted using genomic DNA harvested from MCF-7, BT-474, and human placenta (control). **D.** Pyrosequencing analysis of the *SMPD3* gene in MDA-MB-231, BT-474 and control DNA. **E.** Pyrosequencing analysis of the *DUSP2* gene in MDA-MB-231, BT-549 and control DNA. **F.** Pyrosequencing analysis of the *FOXJ1* gene in MDA-MB-231, BT-474 and control DNA samples.

**Figure 6. Analysis of ATP1B2, DUSP2, SMPD3 and FOXJ1 methylation in primary human breast tumors**

A MSP analysis of the indicated genes was conducted on human primary breast tumors and patient-matched normal breast tissue. B. Representative MSP analysis of six additional human primary breast tumors.

**Figure 7. Analysis of genes characterized as targets for epigenetic silencing in human breast tumors in a panel of mouse mammary tumor lines**

A MSP primers were designed to the mouse orthologs of the *Cdh1*, *Gstp1*, *RarB*, *Wif1*, *RassF1* and *Dapk1* genes. Primer sets were validated using control mouse genomic DNA that was either methylated/unmethylated *in vitro* prior to bisulfite conversion. B. MSP analysis of indicated genes was conducted on bisulfite-converted DNA isolated from indicated mouse mammary tumor lines. gDNA was harvested from the cell lines and bisulfite-modified. These DNA samples were used in MSP analyses.

**Table I**

Afhgap29	Rho GTPase activating protein 29 (Afghap29), mRNA	NM_172525	19.18384	3.71E-10
E430004F17Rik	RIKEN cDNA E430004F17 gene (E430004F17Rik), mRNA	NM_183199	19.05738	5.93E-16
Stard10	START domain containing 10 (Stard10), mRNA	NM_019990	18.91585	1.20E-12
Fn3k	Fructosamine 3 kinase (Fn3k), mRNA	NM_022014	18.91504	1.03E-24
Pfn2	Profilin 2, mRNA (cDNA clone MGC:35930 IMAGE:5059568)	NM_019410	18.78823	1.79E-18
Ptgfr	Prostaglandin F receptor (Ptgfr), mRNA	AK086563	18.75204	3.09E-08
Man1a	Mannosidase 1, alpha, mRNA (cDNA clone MGC:18448 IMAGE:4223319)	NM_008548	18.7403	3.14E-08
Vwf	Von Willebrand factor (Vwf) mRNA, exon 1 and 5'UTR	AK044921	18.63142	5.82E-08
Klf27	Kinesin family member 27 (Klf27), mRNA	NM_175214	18.39237	2.38E-42
Sh2d4b	SH2 domain containing 4B (Sh2d4b), mRNA	NM_177816	18.37578	5.13E-08

Primary Sequence Name	Sequence Description	Accession #	Fold Change	P-value
Sh2d1b	SH2 domain protein 1B (Sh2d1b), mRNA	NM_012009	18.35538	3.50E-08
Arhgap29	Rho GTPase activating protein 29 (Arhgap29), mRNA	NM_172525	17.9961	1.04E-10
AI450469	Transcribed locus	AI450469	17.7114	4.97E-28
4930504O13Rik	RIKEN cDNA 4930504O13 gene (4930504O13Rik), mRNA	NM_207527	17.60137	7.87E-08
Anxa6	Mus musculus 10, 11 days embryo whole body cDNA, RIKEN full-length enriched library, clone:2810407D22 product: annexin A6, full insert sequence.	AK013026	17.41486	1.20E-08
Mical2	MKIAA0750 protein	NM_177282	17.22894	1.87E-11
Linc15	Leucine rich repeat containing 15 (Linc15), mRNA	BC050245	17.22617	1.28E-27
NM_133237	Mus musculus cDNA sequence AB023957 (AB023957), mRNA [NM_133237]	NM_133237	17.09971	2.44E-31
Myl2	Myosin, light polypeptide 2, regulatory, cardiac, slow (Myl2), mRNA	NM_010861	17.05658	5.16E-06
Trib2	Tribbles homolog 2 (Drosophila), mRNA (cDNA clone MGC:32449 IMAGE:5043179)	NM_144551	16.9309	1.31E-20
A930037G23Rik	RIKEN cDNA A930037G23 gene, mRNA (cDNA clone MGC:67253 IMAGE:6403474)	NM_178787	16.70077	1.01E-25
Derl3	Derl-like domain family, member 3 (Derl3), mRNA	NM_024440	16.70039	2.27E-08
Ras11b	RAS-like, family 11, member B, mRNA (cDNA clone MGC:7064 IMAGE:3156762)	AK004524	16.64886	4.78E-26
AI30052D22	Mus musculus hypothetical protein A130052D22 (A130052D22), mRNA [NM_183306]	NM_183306	16.27097	3.94E-29
Soat1	Sterol O-acyltransferase 1, mRNA (cDNA clone IMAGE:4007277)	BC025091	16.22614	2.66E-44
Adam30	A disintegrin and metalloproteinase domain 30 (Adam30), mRNA	AK077058	16.15904	0.00015
Abi2	Ankyrin repeat and BTB (POZ) domain containing 2, mRNA (cDNA clone MGC:62845 IMAGE:6493840)	NM_178890	16.12632	2.87E-27
Dock4	<b>MKIAA0716 protein</b>	<b>AK085106</b>	<b>15.90782</b>	<b>4.44E-37</b>
6720468P15Rik	0 day neonate thymus cDNA, RIKEN full-length enriched library, clone:A430057M21 product: unclassifiable, full insert sequence	AK078497	15.87182	4.79E-06
Cxcl4	Chemokine (C-X-C motif) ligand 4 (Cxcl4), mRNA	NM_019932	15.81666	7.84E-36
Otub2	OTU domain, ubiquitin aldehyde binding 2 (Otub2), mRNA	NM_026580	15.80523	1.53E-15
Thyn1	Thymocyte protein mThy28	AK037947	15.5622	1.23E-07
E130308A19Rik	RIKEN cDNA E130308A19 gene (E130308A19Rik), transcript variant 1, mRNA	AK038359	15.44643	1.28E-07
0610042C05Rik	RIKEN cDNA 0610042C05 gene, mRNA (cDNA clone MGC:37398 IMAGE:4977394)	AK076350	15.44004	4.96E-07
Chn2	Beta chimaerin (bch gene)	NM_023543	15.41819	2.69E-07
Rab3b	RAB3B, member RAS oncogene family (Rab3b), mRNA	NM_023537	15.2858	2.35E-15
Anxa6	Annexin A6, mRNA (cDNA clone MGC:6574 IMAGE:3482035)	NM_013472	15.14969	1.10E-13
Nedd9	Neural precursor cell expressed, developmentally down-regulated gene 9, mRNA (cDNA clone IMAGE:3499250)	NM_017464	15.10892	1.79E-15
Dazl	Deleted in azoospermia-like (Dazl), mRNA	NM_010021	15.03384	3.11E-43
Glccl1	Glucocorticoid induced transcript 1 (Glccl1), transcript variant 1, mRNA	AK042221	14.97325	2.00E-07

Primary Sequence Name	Sequence Description	Accession #	Fold Change	P-value
Tidp2	Transcription factor Dp 2, mRNA (cDNA clone IMAGE:30604420)	NM_178667	1.4.96471	2.5E-17
<b>Cacna1g</b>	<b>Calcium channel, voltage-dependent, T type, alpha 1G subunit (Ca<sup>n</sup>a1g), mRNA</b>	<b>NM_009783</b>	<b>14.955897</b>	<b>1.24E-16</b>
Ifnia4	Interferon alpha family, gene 4 (Ifna4), mRNA	NM_010504	14.95108	1.76E-07
Notch3	Notch gene homolog 3 (Drosophila) (Notch3), mRNA	NM_008716	14.90218	1.13E-28
Pacsin1	Protein kinase C and casein kinase substrate in neurons 1, mRNA (cDNA clone MGC:25285 IMAGE:4527708)	NM_011861	14.88882	1.74E-11
<b>Atp1b2</b>	<b>ATPase, Na<sup>+</sup>/K<sup>+</sup> transporting, beta 2 polypeptide (Atp1b2), mRNA</b>	<b>NM_013415</b>	<b>14.7351</b>	<b>1.07E-22</b>
Habp2	HYALURONIC ACID BINDING PROTEIN 2; HYADURONIC ACID-BINDING PROTEIN 2. [Source:RefSeq;Acc:NM_146101] [ENSEMUST0000026060]	14.65301	2.18E-06	
Fabp7	Fatty acid binding protein 7, brain (Fabp7), mRNA	NM_021272	14.34666	4.16E-06
D14Ert171e	DNA segment, Chr 14, ERATO Doi 171, expressed, mRNA (cDNA clone MGC:59433 IMAGE:6331997)	AK039674	14.3364	2.78E-07
Oas1d	2'-5'oligoadenylate synthetase 1D (Oas1d)	NM_133893	14.18881	1.1E-14
Nid1	Nidogen 1 (Nid1), mRNA	NM_010917	14.08903	5.04E-23
Mcf2l	Mcf-2 transforming sequence-like (Mcf2l), mRNA	NM_178076	14.07378	6.06E-26
Hbb-b1	Hemoglobin, beta adult major chain, mRNA (cDNA clone MGC:40691 IMAGE:3988455)	NM_008220	14.02514	4.51E-07
Prg4	PREDICTED: proteoglycan 4 [Mus musculus], mRNA sequence	AB034730	14.01659	1.28E-07
4930524B15Rik	RIKEN cDNA 4930524B15 gene (4930524B15rik), mRNA	NM_026262	13.99617	8.54E-07
Zfp422-rs1	0 day neonate head cDNA, RIKEN full-length enriched library, clone:4833416F15 product: unclassifiable, full insert zinc finger protein 422, related sequence 1	AK014707	13.9541	1.99E-43
AI607043	Adult male small intestine cDNA, RIKEN full-length enriched library, clone:2010310C07 product: unclassifiable, full insert sequence	AI607043	13.90419	1.08E-12
Dnajc5b	DnaJ (Hsp40) homolog, subfamily C, member 5 beta (Dnajc5b), mRNA	NM_025489	13.89499	0.00001
Slc2a6	Solute carrier family 2 (facilitated glucose transporter), member 6 (Slc2a6), mRNA	NM_172659	13.84051	3.99E-43
Drcmnb1a	down-regulated by Cmnb1, a	NM_053090	13.83104	1.14E-34
Sdc4	Syndecan 4, mRNA (cDNA clone MGC:11456 IMAGE:3154160)	NM_011521	13.79767	7.42E-23
Ell3	Elongation factor RNA polymerase II-like 3 (Ell3), mRNA	NM_145973	13.77959	5.40E-23
Stard10	START domain containing 10 (Stard10), mRNA	NM_019990	13.74577	6.06E-19
Mapk8ip1	JNK interacting protein-1b (JIP-1b)	AK053819	13.62189	1.54E-12
1110051M20Rik	RIKEN cDNA 1110051M20 gene, transcript variant 2, mRNA (cDNA clone MGC:103036 IMAGE:6440075)	AK053282	13.62105	1.43E-18
Ppifa4	MKIAA0897 protein	XM_129443	13.46761	1.10E-27
Itga6	Integrin alpha 6 (Itga6), mRNA	BC024571	13.44888	1.15E-11
Nfiafc2	Mus musculus 16 days embryo head cDNA, RIKEN full-length enriched library, clone:C130082H17 product: nuclear factor of activated T-cells, cytoplasmic 2, full insert	AK081853	13.39808	9.81E-45
4933401N24Rik	RIKEN cDNA 4933401N24 gene (4933401N24rik), mRNA	NM_175367	13.39483	1.76E-41

Primary Sequence Name	Sequence Description	Accession #	Fold Change	P-value
Mpp7	Membrane protein, palmitoylated 7 (MAGUK p55 subfamily member 7), mRNA (cDNA clone IMAGE:6532780)	AK036956	13.36708	1.64E-28
Acpp	Acid phosphatase, prostate (Acpp), transcript variant 2, mRNA	NM_207668	13.35389	1.35E-17
AK038010	16 days neonate thymus cDNA, RIKEN full-length enriched library, clone:A130071G05 product: unclassifiable, full insert sequence	AK038010	13.30008	5.17E-07
XM_156408	Mus musculus similar to RIKEN cDNA 2610524H06 gene (LOC239727), mRNA [XM_156408]	XM_156408	13.28902	4.58E-14

Ppl	Periplakin (Ppl), mRNA	NM_008909	11.26244	2.03E-08
TC976091	AY129963 GPI-gamma 4; GPIgamma4 {Mus musculus}, partial (72%) [TC976091]	NM_21971	11.23955	1.47E-09
BC067047	PREDICTED: PREX1 protein [Mus musculus], mRNA sequence	AK09301	11.18218	2.25E-21
Tekt1	Tektin 1 (Tekt1), mRNA	NM_011569	11.17168	2.41E-26
Atnl1	Actinin like 1, mRNA (cDNA clone IMAGE:4221668)	AK050882	11.16275	1.82E-14
4930470F04Rik	RAB11 family interacting protein 2 (class I) (Rab11fp2), mRNA	AK015532	11.14061	0.00748
Svep1	Sushi, von Willebrand factor type A, EGF and pentraxin domain containing 1, mRNA (cDNA clone IMAGE:3582135)	AK035333	11.11646	3.62E-06
AK052909	16 days neonate heart cDNA, RIKEN full-length enriched library, clone:D830036124 product: weakly similar to CYTOCHROME C OXIDASE POLYPEPTIDE VA, MITOCHONDRIAL PRECURSOR (EC 1.9.3.1) [Rattus norvegicus], full insert sequence	AK052909	11.00683	1.38E-15
Lrp4	MKIAA0816 protein	AK032360	11.00157	7.64E-06
Khk	Ketohexokinase, mRNA (cDNA clone MGC:18722 IMAGE:4235560)	NM_008439	10.99577	1.01E-23
Mpp7	Membrane protein, palmitoylated 7 (MAGUK p55 subfamily member 7), mRNA (cDNA clone IMAGE:6532780)	BC049662	10.97808	2.54E-27
Muc3	Mucin 3, intestinal, mRNA (cDNA clone IMAGE:4989899)	BC058768	10.94339	2.55E-18
3-Mar	Membrane-associated ring finger (C3HC4) 3 (March3), mRNA	AK085528	10.91169	6.53E-19
Baiap2l1	BAI1-associated protein 2-like 1 (Baiap2l1), mRNA	NM_025833	10.90945	1.29E-08
Pger2	Prostaglandin E receptor 2 (subtype EP2), mRNA (cDNA clone MGC:6041 IMAGE:3487087)	NM_008964	10.83013	1.65E-07
Tnfap6	Tumor necrosis factor alpha induced protein 6, mRNA (cDNA clone MGC:13914 IMAGE:4208738)	AK078295	10.7698	2.30E-17
AK037893	Adult male hypothalamus cDNA, RIKEN full-length enriched library, clone:A230098A08 product: hypothetical protein, full insert sequence	AK037893	10.7616	3.07E-15
Ppic	Peptidylprolyl isomerase C, mRNA (cDNA clone MGC:31015 IMAGE:5026674)	NM_008908	10.73102	1.49E-26
Kcnjl	Potassium inwardly-rectifying channel, subfamily J, member 1, mRNA (cDNA clone MGC:18350 IMAGE:4241262)	NM_019659	10.65826	0.00005
Zfp423	Early B-cell factor-associated zinc finger protein (Ebfaz)	NM_033327	10.59541	6.09E-06
Rora	RAR-related orphan receptor alpha, mRNA (cDNA clone MGC:5892 IMAGE:3592667)	AK087905	10.59469	9.75E-10
AK050947	9 days embryo whole body cDNA, RIKEN full-length enriched library, clone:D030042L12 product: unclassifiable, full insert sequence	AK050947	10.59118	5.88E-06
AK076715	Mus musculus adult male testis cDNA, RIKEN full-length enriched library, clone:4930420A11 product: unclassifiable, full insert sequence	AK076715	10.58991	2.55E-06
Ttn	Titin, mRNA (cDNA clone IMAGE:5149168)	AK009965	10.56327	0.00001

Primary Sequence Name	Sequence Description	Accession #	Fold Change	P-value
AK038867	Adult male hypothalamus cDNA, RIKEN full-length enriched library, clone:A230069K02 product: hypothetical protein, full insert sequence	AK038867	10.55157	0.00001
Ifid1	Interferon-related developmental regulator 1 (Ifid1), mRNA	AK078888	10.54876	2.35E-12
Bnp8a	Bone morphogenetic protein 8a (Bmp8a), mRNA	NM_007558	10.50666	1.72E-12
NPTR61SE50fPA	olfactory receptor NPTR61SE50fPA	NM_203509	10.50266	6.41E-23
TC1084975	AE003651 CG13260-PA {Drosophila melanogaster}, partial (10% [TC1084975])	10.49094	2.76E-07	
Tnfaip6	Tumor necrosis factor alpha induced protein 6, mRNA (cDNA clone MGC:13914 IMAGE:4208738)	NM_009398	10.44943	2.17E-09
LOC432449	hypothetical gene supported by AK038984	AK038984	10.44738	2.83E-07
2900041A09Rik	RIKEN cDNA 2900041A09 gene (2900041A09Rik), mRNA	NM_182839	10.44139	8.16E-28
1600015H20Rik	RIKEN cDNA 1600015H20 gene, mRNA (cDNA clone IMAGE:3592288)	NM_024237	10.43001	4.20E-45
4930412F09Rik	Mus musculus adult male testis cDNA, RIKEN full-length enriched library, clone:4930412F09 product: unclassifiable, full insert sequence.	AK015119	10.4231	6.86E-26
1700108L22Rik	RIKEN cDNA 1700108L22 gene, mRNA (cDNA clone MGC:38253 IMAGE:5324328)	AK037099	10.41494	4.96E-24
Tjp3	Tight junction protein 3, mRNA (cDNA clone MGC:11960 IMAGE:3600848)	NM_013769	10.41438	5.26E-21
NA053018-1	Unknown		10.38831	1.26E-44
Ibrdc3	IBR domain containing 3, mRNA (cDNA clone IMAGE:5254400)	AK015966	10.37732	9.05E-35
Slco4a1	Solute carrier organic anion transporter family, member 4a1 (Slco4a1), mRNA	NM_148933	10.35873	7.30E-26
E430024C06Rik	Mus musculus 2 days neonate thymus thymic cells cDNA, RIKEN full-length enriched library, clone:E430003N15 product: unclassifiable, full insert sequence.	AK088091	10.34123	3.10E-23
1500026H17Rik	Adult male corpora quadrigemina cDNA, RIKEN full-length enriched library, clone:B230317N08 product: unclassifiable, full insert sequence	AK005299	10.33636	4.98E-16
3110057O12Rik	RIKEN cDNA 3110057O12 gene, mRNA (cDNA clone IMAGE:4007705)	NM_026622	10.33092	1.71E-11
Ptpm	Protein tyrosine phosphatase, receptor type, M (Ptpm), mRNA	AK047905	10.30778	8.35E-06
Hemt1	17 days embryo kidney cDNA, RIKEN full-length enriched library, clone:1920059J21 product:11 beta-hydroxylase homolog [Mus sp], full insert sequence	AK078619	10.30203	7.99E-06
Staul	Staufen (RNA binding protein) homolog 1 (Drosophila), mRNA (cDNA clone MGC:13708 IMAGE:4188394)	AK030890	10.2707	2.31E-16
Hist1h1d	Histone 1, H1d (Hist1h1d), mRNA	NM_145713	10.25591	3.12E-13
D16H22S680E	DNA segment, Chr 16, human D22S680E, expressed (D16H22S680E), mRNA	AK047383	10.23081	1.29E-32
Rgll	Ral guanine nucleotide dissociation stimulator-like 1, mRNA (cDNA clone MGC:18430 IMAGE:4241244)	AK032340	10.22274	1.40E-45
8430422M09Rik	Mus musculus RIKEN cDNA 8430422M09 gene (8430422M09Rik), mRNA [XM_148115]	XM_148115	10.21893	0.00001
Kcnab3	Potassium voltage-gated channel, shaker-related subfamily, beta member 3, mRNA (cDNA clone MGC:27635 IMAGE:4507029)	NM_010599	10.2158	1.74E-06
Slc25a21	Solute carrier family 25 (mitochondrial oxodicarboxylate carrier), member 21, mRNA (cDNA clone MGC:67702 IMAGE:5042653)	NM_172577	10.21333	5.59E-14

Primary Sequence Name	Sequence Description	Accession #	Fold Change	P-value
Col20a1	Collagen, type XX, alpha 1, mRNA (cDNA clone IMAGE:5366843)	AK006759	10.16397	3.65E-12
Hrbl	HIV-1 Rev binding protein-like (Hrbl), transcript variant 1, mRNA	AK037434	10.14872	3.47E-17
NM_029423	Mus musculus RIKEN cDNA 4833414G05 gene (4833414G05Rik), mRNA [NM_029423]	NM_029423	10.1245	3.34E-13
Kcnma1	Large conductance calcium activated potassium BK channel STREX-1 variant (Slo)	AK052354	10.12088	7.76E-06
Hivep3	Clone 5'RACE1 ZAS3 (Krc) mRNA, 5' UTR	AK087330	10.11146	8.57E-37
Isl2	Insulin related protein 2 (islet 2) (Isl2), mRNA	NM_027397	10.06446	6.70E-06
A930034L06Rik	RIKEN cDNA A930034L06 gene (A930034L06Rik), mRNA	NM_175692	10.0482	3.73E-14
Rhbg	Rhesus blood group-associated B glycoprotein, mRNA (cDNA clone MGC:35874 IMAGE:4218889)	NM_021375	10.00581	2.67E-18
Grip1	GH regulated TBC protein 1, mRNA (cDNA clone MGC:27905 IMAGE:3500563)	NM_025768	9.93642	5.59E-28
Pfkfb2	6-phosphofructo-2-kinase/fructose-2,6-biphosphatase 2, mRNA (cDNA clone MGC:25723 IMAGE:3979400)	AK016729	9.92957	3.07E-35

4732467B22	hypothetical protein 4732467B22	NM_177822	7.33593	6.02E-12
SpiB	Spi-B transcription factor (Spi-1/PU.1 related) (SpiB), mRNA	U87620	7.32567	1.70E-08
Aldh1a1	Ahd2=acetaldehyde dehydrogenase [mice, BALB/c, livers, mRNA Partial, 1632 nt]	NM_013467	7.32059	1.68E-29
BB128963	Expressed sequence BB128963, mRNA (cDNA clone IMAGE:3964696)	AK088715	7.29587	3.02E-21
Samd8	Sterile alpha motif domain containing 8 (Samd8), mRNA	NM_026283	7.28944	2.04E-13
Dnm1t3b	DNA cytosine methyltransferase 3b6 (Dnmnt3b6) mRNA, complete cds; alternatively spliced	NM_010068	7.28075	1.55E-06
Txnip	Thioredoxin interacting protein, mRNA (cDNA clone MGC:25534 IMAGE:3591421)	AK004653	7.27867	6.51E-09
D930040F23Rik	Mus musculus adult male olfactory brain cDNA, RIKEN full-length enriched library, clone:E43040707 product: unclassifiable, full insert sequence.	AK032178	7.26988	3.49E-09
Wdr47	WD repeat domain 47 (Wdr47), mRNA	NM_181400	7.26652	1.73E-06
Pia2g5	Phospholipase A2, group V, mRNA (cDNA clone MGC:31537 IMAGE:4502326)	NM_011110	7.25852	7.82E-12
Tex101	Testis expressed gene 101 (Tex101), mRNA	NM_019981	7.22574	4.77E-20
Gprk5	G protein-coupled receptor kinase 5 (GRK5)	AK079806	7.217	0.00001
Cry2	<b>Cryptochrome 2 (photolyase-like), mRNA (cDNA clone IMAGE:3593948)</b>	<b>NM_009963</b>	<b>7.21232</b>	<b>4.87E-34</b>
Epb4.113	Protein 4.1B (Epb4.113)	AK086340	7.20588	0.00037
Cpeb4	Cytoplasmic polyadenylation element binding protein 4 (Cpeb4), mRNA	AY313775	7.18189	1.32E-08
Rasgef1b	RasGEF domain family, member 1B (Rasgef1b), transcript variant 1, mRNA	NM_181318	7.17597	4.25E-16

Primary Sequence Name	Sequence Description	Accession #	Fold Change	P-value
Atnl1	Actin like 1, mRNA (cDNA clone IMAGE:4221668)	AK048968	7.15363	4.73E-28
Ablml1	Actin-binding LIM protein 1, mRNA (cDNA clone IMAGE:5323557)	AK031453	7.15289	6.91E-24
D930005D10Rik	MKIAA1849 protein	NM_178702	7.13213	5.89E-24
Rgll	Ral guanine nucleotide dissociation stimulator-like 1, mRNA (cDNA clone MGC:18430 IMAGE:4241244)	NM_016846	7.12829	2.93E-40
Olfir295	Olfactory receptor 295 (Olfir295), mRNA	NM_146851	7.12443	2.88E-06
Ccpgl	Cell cycle progression 1, mRNA (cDNA clone MGC:12151 IMAGE:3711012)	BC006717	7.12363	1.51E-24
Zhbib10	PREDICTED: zinc finger and BTB domain containing 10 [Mus musculus], mRNA sequence	AK083443	7.11228	0.00061
Icosl	Icos ligand, mRNA (cDNA clone MGC:355971 IMAGE:4217333)	NM_015790	7.1024	0.0004
Mycn	Neuroblastoma myc-related oncogene 1, mRNA (cDNA clone MGC:6240 IMAGE:3495446)	NM_008709	7.10045	0.0004
D030074K08Rik	YY1 associated factor 2 (Yaf2), mRNA	AK083749	7.09956	0.00016
Sle6a18	Solute carrier family 6 (neurotransmitter transporter), member 18, mRNA (cDNA clone MGC:18346 IMAGE:4235659)	AK085473	7.09686	0.00038
Tex12	Testis protein TEX12 (Tex12)	NM_025687	7.09649	1.01E-10
Usp49	Ubiquitin specific peptidase 49 (Usp49), mRNA	NM_198421	7.09535	1.27E-14
Magi3	Membrane associated guanylate kinase, WW and PDZ domain containing 3 (Magi3), mRNA	NM_133853	7.08507	8.81E-28
Mgl1	Macrophage galactose N-acetyl-galactosamine specific lectin 1 (Mgl1), mRNA	NM_010796	7.07263	8.28E-25
Pdlim5	PDZ and LIM domain 5, mRNA (cDNA clone MGC:46824 IMAGE:4457868)	NM_019809	7.05824	9.20E-15
A6300050104Rik	RIKEN cDNA A6300050104 gene (A6300050104Rik), mRNA	AK088332	7.03002	2.01E-26
AK089990	RCB-0559 K-1.F1 cDNA, RIKEN full-length enriched library, clone:G430046105 product: unclassifiable, full insert sequence	AK089990	7.0234	9.15E-19
Drm	MKIAA0353 protein	NM_201639	7.0219	2.13E-11
Fabp4	Fatty acid binding protein 4, adipocyte (Fabp4), mRNA	NM_024406	7.02153	1.00E-18
4930463G05Rik	PREDICTED: Mus musculus RIKEN cDNA 4930463G05 gene (4930463G05Rik), mRNA	AK015217	7.02125	1.22E-42
Rsh3	PREDICTED: similar to radial spoke head-like 1 [Mus musculus], mRNA sequence	AK038980	7.01713	0.00039
Smpd3	Sphingomyelin phosphodiesterase 3, neutral (Smpd3), mRNA	NM_021491	7.00037	1.98E-09
AI931714	PREDICTED: hypothetical protein LOC102182 [Mus musculus], mRNA sequence	AK045296	7.00021	4.36E-14
Diras1	DIRAS family, GTP-binding RAS-like 1 (Diras1), mRNA	NM_145217	6.99843	8.46E-28
Olfir460	Olfactory receptor 460 (Olfir460), mRNA	NM_146383	6.98029	0.00004
Lphn3	Latrophilin 3, mRNA (cDNA clone IMAGE:30549106)	AK053210	6.97894	0.00044
1700026L06Rik	RIKEN cDNA 1700026L06 gene (1700026L06Rik), mRNA	BC055108	6.97247	2.83E-27
Kremen1	Kringle containing transmembrane protein 1 (Kremen1), mRNA	AK081707	6.95532	2.39E-24
B3gnt4	Beta1,3 N-acetylglicosaminyltransferase-4 (B3gnt4)	NM_198611	6.94475	2.02E-12
Hcn3	Hyperpolarization-activated, cyclic nucleotide-gated K+ 3 (Hcn3), mRNA	NM_008227	6.93488	8.78E-08

Primary Sequence Name	Sequence Description	Accession #	Fold Change	P-value
Ptxdc1	Plexin domain containing 1 (Ptxdc1), mRNA	NM_028199	6.93463	8.74E-18
Meig1	Meiosis expressed gene 1 (Meig1), mRNA	NM_008579	6.92131	9.92E-14
Cdx1	Caudal type homeo box 1, mRNA (cDNA clone MGC:28644 IMAGE:4224352)	NM_009880	6.91978	0.00044
Zfp3	Zona pellucida glycoprotein 3 (Zfp3), mRNA	NM_011776	6.91854	8.16E-36
6530409C15Rik	PREDICTED: hypothetical protein LOC76224 [Mus musculus], mRNA sequence	AK018330	6.91722	0.00041
4930518F03Rik	Mus musculus RIKEN cDNA 4930518F03 gene (4930518F03Rik), mRNA [NM_177191]	NM_177191	6.91301	0.00073
Mmp2	Matrix metallopeptidase 2 (Mmp2), mRNA	BFL47716	6.91006	1.84E-11
Here5	Iduronato sulfatase	AK037442	6.90618	7.13E-07
Neud4	Clone m62 zinc finger protein neuro-d4 (neuro-d4)	NM_013874	6.90322	1.87E-11
Slc16a10	Solute carrier family 16 (monocarboxylic acid transporters), member 10, mRNA (cDNA clone MGC:60866 IMAGE:30046388)	AK011813	6.89975	2.58E-10
TC947784	SNAG_HUMAN Gamma-a-soluble NSF attachment protein (SNAP-gamma) (N-ethylmaleimide-sensitive factor attachment protein, gamma). Human [Homo sapiens], partial (13%) [TC947784]		6.88434	0.00048
Tmem64	Transmembrane protein 64, mRNA (cDNA clone MGC:40684 IMAGE:3661112)	AK035894	6.87747	0.00049
AK043237	Mus musculus 7 days neonate cerebellum cDNA, RIKEN full-length enriched library, clone: A730074B07 product: unclassifiable, full insert sequence.	AK043237	6.86471	0.00065
Gm172	PREDICTED: similar to hypothetical protein [Mus musculus], mRNA sequence	AV254918	6.86109	7.31E-13
Apobec2	Apolipoprotein B editing complex 2, mRNA (cDNA clone MGC:41184 IMAGE:1433092)	NM_006964	6.85954	0.0007
<b>Bcl2l11</b>	<b>BCL2-like 11 (apoptosis facilitator), transcript variant 1, mRNA (cDNA clone MGC:28730 IMAGE:4459720)</b>	<b>BC058175</b>	<b>6.85608</b>	<b>1.80E-13</b>
Gent1	Glucosaminyl (N-acetyl) transferase 1, core 2, mRNA (cDNA clone MGC:11452 IMAGE:3154671)	NM_173442	6.84626	6.17E-10
Fcgr3	Fc gamma receptor III (Fcgr3) mRNA, Fcgr3-b allele	NM_010188	6.844	1.64E-15
Zdhhe6	Zinc finger, DHHC domain containing 6, mRNA (cDNA clone MGC:30394 IMAGE:4459242)	NM_025883	6.84083	0.00001
Pbx4	Pre-B-cell leukemia transcription factor 4, mRNA (cDNA clone MGC:40990 IMAGE:1263363)	NM_030555	6.83768	6.20E-23
Eif2c3	Eukaryotic translation initiation factor 2C, 3 (Eif2c3), mRNA	BC060127	6.80015	7.50E-12
1810057P16Rik	RIKEN cDNA 1810057P16 gene (1810057P16Rik), mRNA	AK075801	6.77942	5.18E-12
Osbp18	Oxysterol binding protein-like 8 (Osbp18), transcript variant 2, mRNA	AK036477	6.77762	1.16E-17
Lysmd4	RIKEN cDNA 4930506D23 gene, mRNA (cDNA clone MGC:65434 IMAGE:4504057)	AK039294	6.75923	2.83E-18
Fsd1	Fibronectin type 3 and SPRY domain-containing protein (Fsd1), mRNA	NM_183178	6.74462	0.0004
Lcnt1	Leucine carboxyl methyltransferase 1, mRNA (cDNA clone IMAGE:3595687)	NM_025304	6.72952	3.34E-35
<b>Bach2</b>	<b>BTB and CNC homology 2 (Bach2), mRNA</b>	<b>NM_007521</b>	<b>6.72785</b>	<b>5.54E-12</b>
Kif17	Kinesin family member 17 (Kif17), mRNA	NM_010623	6.70819	8.92E-14
LOC195281	similar to Proton-associated sugar transporter A (PAST-A) (Deleted in neuroblastoma 5 protein) (DNb-5)	XM_111577	6.70613	4.14E-29
D330012F22Rik	RIKEN cDNA D330012F22 gene, mRNA (cDNA clone MGC:47349 IMAGE:4458984)	AK084531	6.70519	3.43E-07

Primary Sequence Name	Sequence Description	Accession #	Fold Change	P-value
Athgef7	Rho guanine nucleotide exchange factor (GEF7) (Athgef7), mRNA	AK129064	6.70342	1.94E-21
D930046H04Rik	Mus musculus RIKEN cDNA D930046H04 gene (D930046H04Rik), mRNA [NM_176934]	NM_176934	6.70196	0.00005
Tnem24	Transmembrane protein 24, mRNA (cDNA clone IMAGE:5360163)	AK004920	6.68313	1.32E-19
Cyp46a1	Cytochrome P450, family 46, subfamily a, polypeptide 1, mRNA (cDNA clone MGC:18311 IMAGE:4193579)	NM_010010	6.67773	6.83E-22
Usp22	MKIAA1063 protein	AK086502	6.67222	1.15E-09
9530059J11Rik	Mus musculus adult male urinary bladder cDNA, RIKEN full-length enriched library, clone:9530059J11 product: weakly similar to 12 DAYS EMBRYO HEAD CDNA, RIKEN FULL-LENGTH ENRICHED LIBRARY, CLONE:3010005E14., FULL INSERT SEQUENCE [Mus musculus], full insert sequence.	AK020615	6.66825	1.21E-08
Mgst3	Microsomal glutathione S-transferase 3, mRNA (cDNA clone MGC:35738 IMAGE:5372427)	AK008211	6.65726	9.29E-09
9330107J05Rik	PREDICTED: hypothetical protein LOC73884 [Mus musculus], mRNA sequence	AK047625	6.65622	0.00061
Grb7	Growth factor receptor bound protein 7, mRNA (cDNA clone MGC:5653 IMAGE:3583896)	NM_010346	6.65154	6.22E-12
Pros1	Protein S (alpha) (Pros1), mRNA	NM_011173	6.6501	9.72E-31
Usf1	M.musculus USF1 (non-coding exon 1).	X95315	6.64978	1.88E-09
Grin3b	Glutamate receptor, ionotropic, NMDA3B (Grin3b), mRNA	NM_130455	6.64959	3.38E-22
A730016F12Rik	Mus musculus RIKEN cDNA A730016F12 gene (A730016F12Rik), transcript variant 2, mRNA [NM_175079]	NM_175079	6.64561	1.08E-35
Casz1	MKIAA3026 protein	AK010559	6.63118	9.68E-36
Nckap1l	NCK associated protein 1 like (Nckap1l), mRNA	NM_153505	6.62986	7.63E-07
A1324046	Immunoglobulin heavy chain 6 (heavy chain of IgM), mRNA (cDNA clone MGC:18788 IMAGE:4189350)	NM_198640	6.62565	0.00096
9530001IN24Rik	Peroxiredoxin 1 (Prdx1), mRNA	AK020533	6.60763	2.92E-11
4732496G21Rik	RIKEN cDNA 4732496G21 gene (4732496G21Rik), mRNA	AK035094	6.59781	0.00384
Evp1	Envoplakin, mRNA (cDNA clone IMAGE:3985477)	AK007353	6.59541	1.14E-40
Postn	Periostin, osteoblast specific factor, mRNA (cDNA clone MGC:25368 IMAGE:4457222)	NM_015784	6.59457	2.74E-12
Lyzs	Lysozyme, mRNA (cDNA clone IMAGE:2655792)	NM_017372	6.58874	0.00173
ApoI2	PREDICTED: hypothetical protein XP_139463 [Mus musculus], mRNA sequence	AK036408	6.56783	8.71E-25
Paqr3	Progesterin and adipoQ receptor family member III (Paaq3), mRNA	NM_198422	6.56779	5.81E-14
4833421E05Rik	RIKEN cDNA 4833421E05 gene (4833421E05Rik), mRNA	AK014743	6.56384	7.26E-13
4930519L02Rik	PREDICTED: hypothetical protein LOC75085 [Mus musculus], mRNA sequence	AK015845	6.55752	0.00113
Hrb1	HIV-1 Rev binding protein-like (Hrb1), transcript variant 1, mRNA	NM_178162	6.55743	8.29E-31
Bai2	Brain-specific angiogenesis inhibitor 2, mRNA (cDNA clone MGC:66520 IMAGE:5705854)	NM_173071	6.5429	2.54E-10
Map2k6	MAP Kinase Kinase	NM_011943	6.53525	2.77E-11
Tull	Mus musculus tubulin tyrosine ligase-like 1 (Tull), mRNA	NM_178869	6.52155	6.57E-30
Hand2	BHLH transcription factor dHand	NM_010402	6.51319	0.00064

AI646023	Expressed sequence AI646023 (AI646023), mRNA	NM_198860	6.3422	1.37E-12
Ptpn12	Protein tyrosine phosphatase, non-receptor type 12 (Ptpn12), mRNA	AK087609	6.32927	0.00114
Wdr40b	WD repeat domain 40B, mRNA (cDNA clone MGC:76797 IMAGE:30431243)	NM_178739	6.32111	0.00162
Rap2ip	Rap2 interacting protein (Rap2ip), mRNA	AK007019	6.3115	4.38E-17
6230427J02Rik	RIKEN cDNA 6230427J02 gene (6230427J02Rik), mRNA	AK020090	6.30412	4.72E-38
5730420B22Rik	RIKEN cDNA 5730420B22 gene, mRNA (cDNA clone IMAGE:5356411)	NM_172597	6.29909	2.99E-13
Zhx1	Zinc fingers and homeoboxes protein 1 (Zhx1), mRNA	AK051410	6.29396	3.18E-08
Lmtk2	Lemur tyrosine kinase 2, mRNA (cDNA clone IMAGE:6407188)	BC058553	6.2919	1.25E-23
2410003J06Rik	RIKEN cDNA 2410003J06 gene, mRNA (cDNA clone MGC:60956 IMAGE:30007513)	AK010362	6.2909	1.27E-08
Dgat2	Diacylglycerol O-acyltransferase 2 (Dgat2), mRNA	NM_026384	6.28587	3.72E-19
Rab3d	RAB3D, member RAS oncogene family, mRNA (cDNA clone MGC:6707 IMAGE:3584902)	NM_031874	6.28515	3.96E-08
2610031L17Rik	RIKEN cDNA 2610031L17 gene, mRNA (cDNA clone MGC:38351 IMAGE:5344332)	AK043897	6.2836	0.00003
Jmjcd2d	Hypothetical protein 4932416A15 (4932416A15), mRNA	NM_173433	6.27488	2.19E-07
1700023A16Rik	PREDICTED: hypothetical protein LOC69371 [Mus musculus], mRNA sequence	AK006257	6.27378	2.95E-13
Tmcc3	Transmembrane and coiled coil domains 3, mRNA (cDNA clone MGC:30586 IMAGE:3660220)	NM_172051	6.27294	9.85E-06
Clec2e	C-type lectin domain family 2, member e (Clec2e), mRNA	NM_153506	6.27057	0.0012
H2-DMA	Histocompatibility 2, class II, locus DMA, mRNA (cDNA clone MGC:5743 IMAGE:3591389)	NM_010386	6.26974	1.31E-33
Habp4	Hyaluronic acid binding protein 4 (Habp4), mRNA	NM_019986	6.26891	6.44E-11
LOC434018	hypothetical gene supported by AK029757	AK029757	6.2591	0.0016
2700038N03Rik	RIKEN cDNA 2700038N03 gene, mRNA (cDNA clone MGC:27927 IMAGE:3584484)	NM_027356	6.2369	1.38E-30
3526402J09Rik	RIKEN cDNA 3526402J09 gene, mRNA (cDNA clone IMAGE:30544810)	AK028312	6.23264	3.49E-06
Dlgap1	Discs, large (Drosophila) homolog-associated protein 1 (Dlgap1), transcript variant 2, mRNA	AK034215	6.21769	1.54E-06
9230116B18Rik	PREDICTED: hypothetical protein LOC78245 [Mus musculus], mRNA sequence	AK020348	6.21758	3.02E-09
H2-Ke6	H2-K region expressed gene 6 (H2-Ke6), mRNA	NM_013543	6.21346	6.39E-38
Prdx1	Peroxiredoxin 1 (Prdx1), mRNA	AK083642	6.21182	3.67E-17
4930550L24Rik	Mus musculus RIKEN cDNA 4930550L24 gene (4930550L24Rik), mRNA [NM_023774]	NM_023774	6.21139	6.89E-09
Trim62	Tripartite motif-containing 62 (Trim62), mRNA	NM_178110	6.20606	8.48E-07
NAP044566-1	Unknown		6.20486	9.69E-13
Brsk2	BR serine/threonine kinase 2 (Brsk2), transcript variant 2, mRNA	BC056498	6.18857	0.00023
9630019E01Rik	Mus musculus RIKEN cDNA 4930550L24 gene (4930550L24Rik), mRNA [NM_023774]	AK051384	6.17974	2.17E-15

Primary Sequence Name	Sequence Description	Accession #	Fold Change	P-value
Iiga6	Mus musculus adult male corpora quadrigemina cDNA, RIKEN full-length enriched library, clone:B230112G01 product: integrin alpha 6, full insert sequence.	AK045391	6.17009	2.44E-07
Acox1	Acyl-Coenzyme A oxidase-like (Acox1), mRNA	AV282483	6.16545	1.07E-07
C030014L02	hypothetical protein C030014L02	AK047704	6.15908	0.00132
4921515A04Rik	Mus musculus RIKEN cDNA 4921515A04 gene (4921515A04Rik), mRNA [NM_172939]	NM_172939	6.15587	2.02E-16
Frat1	Frequently rearranged in advanced T-cell lymphomas (Frat1), mRNA	NM_008043	6.14419	9.07E-08
D5Wsu178e	DNA segment, Chr 5, Wayne State University 178, expressed (D5Wsu178e), mRNA	AK046608	6.14236	5.29E-09
AK012034	Mus musculus 10 days embryo whole body cDNA, RIKEN full-length enriched library, clone:2610315N17 product: unclassifiable, full insert sequence.	AK012034	6.1156	2.54E-08
Tax1bp1	Tax1 (human T-cell leukemia virus type I) binding protein 1, mRNA (cDNA clone MGC:11692 IMAGE:3962810)	AK051030	6.11319	0.00526
Syce1	PREDICTED: Mus musculus RIKEN cDNA 4933406J07 gene (4933406J07Rik), mRNA	AK016694	6.1065	1.56E-15
A430091O22Rik	RIKEN cDNA A430091O22 gene (A430091O22Rik), mRNA	AK039072	6.10372	0.00337
<b>Scrib</b>	<b>Scribbled homolog (<i>Drosophila</i>), mRNA (cDNA clone IMAGE:4459388)</b>	<b>AK084936</b>	<b>6.1006</b>	<b>8.84E-14</b>
Rhov	Ras homolog gene family, member V (Rhov), mRNA	NM_145530	6.0999	1.54E-23
AK040776	Adult male aorta and vein cDNA, RIKEN full-length enriched library, clone:A530024117 product: unclassifiable, full insert sequence	AK040776	6.09753	1.78E-38
D330014H01Rik	Mus musculus RIKEN cDNA D330014H01 gene (D330014H01Rik), mRNA [NM_177617]	NM_177617	6.08754	1.59E-14
D0H4S114	DNA segment, human D4S114 (D0H4S114), mRNA	NM_053078	6.08447	0.00133
Herc1	Hect (homologous to the E6-AP (UBE3A) carboxyl terminus) domain and RCC1 (CHCl)-like domain (RLD) 1, mRNA (cDNA clone MGC:7618 IMAGE:3494753)	AK083444	6.08322	4.90E-24
1700065D16Rik	Protein kinase ATM (Atm)	AK030118	6.07886	0.00004
Ppp1r13b	Protein phosphatase 1, regulatory (inhibitor) subunit 1B (Ppp1r13b), mRNA	NM_011625	6.0768	9.44E-25
LOC213402	hypothetical LOC213402	XM_136978	6.07669	6.10E-19
Capsn2	Hypothetical protein A330042H22 (A330042H22), mRNA	AK009171	6.0641	6.40E-07
NM_027559	Mus musculus RIKEN cDNA 4930463G05 gene (4930463G05Rik), mRNA [NM_027559]	NM_027559	6.05992	8.61E-10
2810427104Rik	RIKEN cDNA 2810427104 gene (2810427104Rik), mRNA	NM_028146	6.05072	3.51E-08
Myobp	C-myc binding protein, mRNA (cDNA clone MGC:13820 IMAGE:3985166)	NM_019660	6.0454	3.53E-09
D130076A03Rik	Mus musculus 12 days embryo spinal ganglion cDNA, RIKEN full-length enriched library, clone:D130076A03 product: unclassifiable, full insert sequence.	AK084007	6.04495	1.01E-16
AA919669	Adult male hippocampus cDNA, RIKEN full-length enriched library, clone:2900016J10 product: unclassifiable, full insert sequence	AA919669	6.04404	1.08E-19
Ifrd1	Interferon-related developmental regulator 1 (Ifrd1), mRNA	NM_013562	6.04347	2.10E-09
Ddit4l	DNA-damage-inducible transcript 4-like, mRNA (cDNA clone MGIC:47974 IMAGE:5254530)	NM_030143	6.04198	0.00184
Gsdml	Gasdernin 1 (Gsdml), mRNA	NM_021347	6.04098	2.79E-13

Primary Sequence Name	Sequence Description	Accession #	Fold Change	P-value
3110057O12Rik	RIKEN cDNA 3110057O12 gene, mRNA (cDNA clone IMAGE:4007705)	NM_0266622	6.04095	1.90E-12
Pdpk1	Phosphoinositide-dependent protein kinase-1 beta (Pdk1beta)	NM_011062	6.03733	3.77E-31
Zp3	Zona pellucida glycoprotein 3 (Zp3), mRNA	NM_011776	6.02738	1.28E-12
TC984987	NDK6 HUMAN Nucleoside diphosphate kinase 6(NDK 6) (NDP kinase 6) (nm23-H6) (Inhibitor of p53-induced apoptosis-alpha) (IP1-alpha). [Human] [Homo sapiens], partial (14%) [TC984987]		6.02678	0.00023
1700011E04Rik	PREDICTED: Mus musculus RIKEN cDNA 1700011E04 gene (1700011E04Rik), mRNA	AK005860	6.02661	6.11E-06
Sstr2	Somatostatin receptor 2 (Sstr2), mRNA	NM_009217	6.0182	1.48E-11
Pgm21	Phosphoglucomutase 2-like 1, mRNA (cDNA clone MGC:29299 IMAGE:5004308)	NM_027629	6.01695	1.89E-15
BE646931	Transcribed locus	BE646931	6.00062	1.38E-15
Ccd637	ZXD family zinc finger C, mRNA (cDNA clone MGC:7160 IMAGE:3256958)	AK021139	5.99479	5.23E-06
Timd4	T-cell immunoglobulin and mucin domain containing 4, mRNA (cDNA clone MGC:41117 IMAGE:1195144)	NM_178759	5.98633	0.00165
Ap3m2	Adaptor-related protein complex 3, mu 2 subunit, mRNA (cDNA clone MGC:40858 IMAGE:5369288)	NM_029505	5.97689	1.24E-08
Htr2b	5-hydroxytryptamine (serotonin) receptor 2B, mRNA (cDNA clone MGC:36132 IMAGE:5344328)	NM_008311	5.97448	0.00018
Tfdp2	DP-3-protein regulating cell cycle transcription factor DRTP1/E2F [mice, pl-2, F9 EC, mRNA, 1380 nt].	S79780	5.97116	4.82E-07
Rybp	RING1 and YY1 binding protein (Rybp), mRNA	NM_0119743	5.97057	9.26E-38
Sema3b	<b>Sema domain, immunoglobulin domain (Ig), short basic domain, secreted, (semaphorin) 3B (Sema3b), mRNA</b>	<b>NM_009153</b>	<b>5.9703</b>	<b>2.43E-22</b>
Den	Decorin (Den), mRNA	NM_007833	5.96766	2.08E-06
Lhx2	LIM-homeodomain protein MLHX2 (Lhx2)	NM_010710	5.96324	1.93E-11
Fbxo33	F-box only protein 33, mRNA (cDNA clone IMAGE:3661715)	BC020022	5.96152	1.82E-17
Cfh	Complement component factor h (Cfh), mRNA	M12660	5.95652	0.00006
Psd2	Pleckstrin and Sec7 domain containing 2 (Psd2), mRNA	NM_028707	5.95334	6.23E-14
Ncoal	Nuclear receptor coactivator 1 (Ncoal), mRNA	AA738860	5.94761	1.72E-25
Robo2	MKI61568 protein	BC055333	5.94552	0.00019
AW125753	Expressed sequence AW125753 (AW125753), mRNA	NM_029007	5.94357	1.90E-15
Cfh	Complement component factor h (Cfh), mRNA	NM_009888	5.94161	6.84E-07
1700014D04Rik	PREDICTED: hypothetical protein LOC74224 [Mus musculus], mRNA sequence	AK077007	5.93902	9.40E-15
6-Sep	Mus musculus 2 days neonate thymus thymic cells cDNA, RIKEN full-length enriched library, clone:C920001C06 product: hypothetical protein, full insert sequence.	AK083302	5.93827	0.00283
Pdpk1	Phosphoinositide-dependent protein kinase-1 beta (Pdk1beta)	NM_011062	5.93442	2.75E-36
BC048651	CDNA sequence BC048651 (BC048651), mRNA	NM_207258	5.93022	1.19E-13
Metnrl	Meteorin, glial cell differentiation regulator-like (Metnrl), mRNA	AK053718	5.9294	3.74E-21
LOC229608	Histone 2, H2bb (Hist2h2bb), mRNA	BC019122	5.92838	4.58E-08

Primary Sequence Name	Sequence Description	Accession #	Fold Change	P-value
Arl5b	ADP-ribosylation factor-like 8 (Arl8), mRNA	NM_029466	5.92634	1.03E-09
Olf987	Olfactory receptor 987 (Olf987), mRNA	CB174485	5.92041	0.00266
Malat1	Adult male stomach cDNA, RIKEN full-length enriched library, clone:2210407K09 product: receptor (calcitonin) activity modifying protein 2, full insert sequence	AK020483	5.91958	6.65E-15
Mall	CDNA sequence BC012256 (BC012256), mRNA	NM_145532	5.91692	8.22E-08
Phtf2	Putative homeodomain transcription factor 2, mRNA (cDNA clone MGC:60851 IMAGE:30050876)	NM_172992	5.91568	1.02E-30
D330028D13Rik	RIKEN cDNA D330028D13 gene, mRNA (cDNA clone MGC:67688 IMAGE:4487036)	NM_172727	5.91051	1.54E-22
Rhpn2	Rhophilin, Rho GTPase binding protein 2 (Rhpn2), mRNA	NM_027897	5.90122	2.02E-22
3526402J09Rik	8 days embryo whole body cDNA, RIKEN full-length enriched library, clone:5730590C14 product: unclassifiable, full insert sequence	AK019982	5.89752	1.80E-24
Tigd5	Trigger transposable element derived 5 (Tigd5), mRNA	NM_178646	5.89512	9.40E-16
C230078M08Rik	RIKEN cDNA C230078M08 gene (C230078M08Rik), mRNA	NM_176995	5.88686	6.61E-06
D930001122Rik	RIKEN cDNA D930001122 gene, mRNA (cDNA clone MGC:107602 IMAGE:6750721)	AK052945	5.886474	5.89E-43
Tcf15	Transcription factor 15, mRNA (cDNA clone MGC:41210 IMAGE:5143248)	NM_099328	5.88455	2.79E-14
Wif1	Wnt inhibitory factor 1, mRNA (cDNA clone MGC:13706 IMAGE:3984128)	NM_011915	5.85749	1.02E-06
Egfl5	MKIAA0818 protein	AK122378	5.85619	1.22E-10
Fcer1g	Fc receptor, IgE, high affinity I, gamma polypeptide, mRNA (cDNA clone MGC:36077 IMAGE:5065647)	AI326608	5.85071	2.00E-10
Mtap2	Mus musculus microtubule-associated protein 2 (Mtap2), mRNA [NM_008632]	NM_008632	5.85052	5.98E-13
Uros	Uroporphyrinogen III synthase (Uros), mRNA	NM_009479	5.84947	1.39E-29
3110098I04Rik	Transmembrane protein 49, mRNA (cDNA clone MGC:7590 IMAGE:3493738)	AK019443	5.84922	1.23E-18
Sna13	Snail-related zinc finger protein SMUC (Smuc)	NM_013914	5.84401	6.78E-12
Atzc	Mus musculus hypothetical protein (Arze) mRNA, complete cds.	AY344585	5.83844	1.81E-12
BE987854	Bone marrow macrophage cDNA, RIKEN full-length enriched library, clone:1830003K21 product: unclassifiable, full insert sequence	BE987854	5.8367	3.15E-09
Npc1l1	Mus musculus NPC1-like 1 (Npc1l1), mRNA.	XM_137497	5.83041	2.18E-14
Erv1	Ets variant gene 1, mRNA (cDNA clone MGC:6207 IMAGE:3257346)	NM_007960	5.82656	0.00003
AK041974	3 days neonate thymus cDNA, RIKEN full-length enriched library, clone:AG30050C01 product: unclassifiable, full insert sequence	AK041974	5.82616	0.00025
Atp11b	ATPase, Class VI, type 1 1B (Atp11b), mRNA	AK041684	5.82607	3.61E-08
Pgm21	Phosphoglucomutase 2-like 1, mRNA (cDNA clone MGC:29299 IMAGE:5004308)	NM_027629	5.81964	0.0001
Ppp1r13b	Protein phosphatase 1, regulatory (inhibitor) subunit 13B (Ppp1r13b), mRNA	NM_011625	5.81761	4.07E-12
2310068J10Rik	Adult male tongue cDNA, RIKEN full-length enriched library, clone:2310068J10 product: unclassifiable, full insert sequence	AK075917	5.81515	5.55E-09
Nos3	Nitric oxide synthase 3, endothelial cell (Nos3), mRNA	NM_008713	5.80909	1.30E-07

Primary Sequence Name	Sequence Description	Accession #	Fold Change	P-value
Spsb1	SplA/tryptidine receptor domain and SOCS box containing 1 (Spsb1), mRNA	NM_029035	5.80869	5.16E-13
8430416H19Rik	RIKEN cDNA 8430416H19 gene (8430416H19Rik), mRNA	NM_198636	5.80743	1.09E-11
Gpr111	PREDICTED: similar to G-protein coupled receptor 111 [Mus musculus], mRNA sequence	AY255579	5.79653	0.00225
Pla2g4f	RIKEN cDNA 4732472107 gene (4732472107Rik), mRNA	BC039947	5.7812	5.59E-15
Rfx2	Regulatory factor X, 2 (influences HLA class II expression), mRNA (cDNA clone MGC:6105 IMAGE:3497910)	NM_009056	5.77832	1.13E-11
Dpf3	D4, zinc and double PHD fingers, family 3 (Dpf3), mRNA	NM_058212	5.77719	9.83E-15
Zfp654	Zinc finger protein 654, mRNA (cDNA clone IMAGE:5346461)	NM_028059	5.77371	1.78E-35
Rnut1	RNA, U transporter 1, mRNA (cDNA clone MGC:74414 IMAGE:30251661)	NM_178374	5.76909	7.92E-16
Mpp7	Membrane protein, palmitoylated 7 (MAGUK p55 subfamily member 7), mRNA (cDNA clone IMAGE:6532780)	AK017344	5.76872	3.39E-11
Cx3cl1	Mus musculus mRNA, complete cds, clone:1-53.	AB030188	5.75894	0.00037
Map2k6	Mus musculus 15 days embryo head cDNA, RIKEN full-length enriched library, clone:D930047J04 product: mitogen activated protein kinase kinase 6, full insert sequence.	AK086722	5.74548	2.97E-08
Gsto2	Glutathione S-transferase omega 2 (Gsto2), mRNA	NM_026619	5.73514	3.96E-07
A030009H04Rik	RIKEN cDNA A030009H04 gene, mRNA (cDNA clone MGC:35887 IMAGE:5352453)	NM_020591	5.73374	2.63E-12
Atox1	ATX1 (antioxidant protein 1) homolog 1 (yeast), mRNA (cDNA clone MGC:41183 IMAGE:1328907)	AK089832	5.73109	2.04E-11
Map2k6	MAP Kinase Kinase	NM_011943	5.72903	0.00035
Bmp2k	BMP2 inducible kinase (Bmp2k), mRNA	NM_080708	5.72563	2.28E-11
St3gal5	ST3 beta-galactoside alpha-2,3-sialyltransferase 5 (St3gal5), mRNA	AI464789	5.72266	0.0001
Rasd1	RAS, dexamethasone-induced 1, mRNA (cDNA clone MGC:36188 IMAGE:4989312)	NM_009026	5.71641	9.16E-11
C330001K17Rik	RIKEN cDNA C330001K17 gene (C330001K17Rik), mRNA	AK031175	5.70009	1.16E-08
Olig2	Olig2 bHLH protein	BC051967	5.69272	0.00135
Zfp422-rs1	zinc finger protein 422, related sequence 1	NM_029952	5.68877	7.93E-14
Cen1	Cyclin I, mRNA (cDNA clone MGC:5636 IMAGE:3583418)	AK083496	5.68864	0.00337
AK028719	10 days neonate skin cDNA, RIKEN full-length enriched library, clone:4732444IB01 product: unclassifiable, full insert sequence	AK028719	5.68121	0.00073
5730469D23Rik	RIKEN cDNA 5730469D23 gene, mRNA (cDNA clone MGC:66555 IMAGE:6825308)	AK017687	5.67016	6.96E-16
Tspan1	Tetraspan 1 (Tspan1), mRNA	NM_133681	5.66843	7.35E-08
Ebf1	Early B-cell factor 1 (Ebf1), mRNA	AK036716	5.66713	0.00329
Susd2	Sushi domain containing 2 (Susd2), mRNA	NM_027890	5.66242	2.96E-08
XM_131928	Mus musculus myeloid/lymphoid or mixed-lineage leukemia 3 (Mll3), mRNA [XM_131928]	XM_131928	5.65966	0.00033
Trfr2	Transferrin receptor 2, mRNA (cDNA clone MGC:18814 IMAGE:4196597)	NM_015799	5.65881	2.39E-07
Tspyl4	Mus musculus TSPY-like 4 (Tspyl4), mRNA.	NM_133745	5.63493	1.21E-11

Primary Sequence Name	Sequence Description	Accession #	Fold Change	P-value
Hgf	Hepatocyte growth factor	AK082461	5.65072	0.00111
Txnip	Thioredoxin interacting protein, mRNA (cDNA clone MGC:25534 IMAGE:3591421)	AK004653	5.6496	1.05E-06
Angptl2	Angiopoietin-like 2 (Angptl2), mRNA	AK035967	5.64678	9.32E-12
Dos	Downstream of Sk11 (Dos), mRNA	AK035824	5.6364	2.23E-11
Mars2	Methionine-tRNA synthetase 2 (mitochondrial), mRNA (cDNA clone MGC:106216 IMAGE:3153138)	NM_175439	5.62867	1.35E-27
Hamp1	Prohepcidin (hepc1)	NM_032541	5.62597	1.61E-09
BC049806	CDNA sequence BC049806, mRNA (cDNA clone MGC:76460 IMAGE:30431671)	NM_172513	5.62361	6.88E-34
Sbsn	suprabasins	NM_172205	5.62177	3.83E-18
FHOS2	formin-family protein FHOS2	NM_175276	5.62016	0.00001
Als2	Amyotrophic lateral sclerosis 2 (juvenile) homolog (human), mRNA (cDNA clone MGC:27807 IMAGE:3257574)	NM_028717	5.61726	6.41E-30
5330420D20Rik	RIKEN cDNA 5330420D20 gene (5330420D20Rik), mRNA	NM_027442	5.61363	0.00005
Gdap5	Dishevelled associated activator of morphogenesis 1 (Daam1), mRNA	Y17854	5.61177	1.02E-26
E030003N13Rik	Fibroblast growth factor receptor substrate 2, mRNA (cDNA clone MGC:64739 IMAGE:6830555)	AK051267	5.61074	0.00191
Zfp59	Zinc finger protein 59 (Zfp59), mRNA	AK042484	5.60473	0.00217
Rnd1	Rho family GTPase 1, mRNA (cDNA clone MGC:58446 IMAGE:6535763)	BC048531	5.60436	2.78E-39
Ypel4	Ypel4 mRNA for yippee-like 4	AK043577	5.60118	0.00005
Hbld2	HESB like domain containing 2 (Hbld2), mRNA	NM_026921	5.59811	1.03E-15
Plekhhk1	Membrane-bound factor MBF1 (MbF)	AY036116	5.59772	2.32E-19
Asb11	Mus musculus adult male colon cDNA, RIKEN full-length enriched library, clone:9030022F06 product: ankyrin repeat and SOCS box-containing protein 11, full insert sequence.	AK078851	5.59544	0.00382
TC996139	Unknown		5.59089	1.46E-07
Bai2	Brain-specific angiogenesis inhibitor 2, mRNA (cDNA clone MGC:66520 IMAGE:5705854)	NM_173071	5.57838	0.00002
Rnf17	Ring finger protein 17 (Rnf17), transcript variant 1, mRNA	NM_013894	5.57648	0.00408
Scoc	Short coiled-coil protein, mRNA (cDNA clone MGC:28845 IMAGE:4506964)	NM_019708	5.57413	1.02E-21
Lama3	Laminin-5, alpha3B chain	X84014	5.56979	1.47E-30
Bmp6	Bone morphogenetic protein 6 (Bmp6), mRNA	NM_007556	5.5686	6.55E-09
Dfia	DNA fragmentation factor, alpha subunit (Dfia), transcript variant 2, mRNA	AK051011	5.55806	2.27E-19
Nfatc4	Nuclear factor of activated T-cells, cytoplasmic, calcineurin-dependent 4, mRNA (cDNA clone MGC:25538 IMAGE:3670623)	AK014164	5.55789	1.20E-09
Klc3	Kinesin light chain 3 (Klc3), mRNA	NM_146182	5.55558	2.85E-09
Kif17	Kinesin family member 17 (Kif17), mRNA	NM_010623	5.5494	0.00022
Btbd10	BTB (POZ) domain containing 10, mRNA (cDNA clone IMAGE:3484902)	AK052335	5.54822	4.06E-10

Primary Sequence Name	Sequence Description	Accession #	Fold Change	P-value
Slc25a35	Solute carrier family 25, member 35 (Slc25a35), mRNA	NM_028048	5.54317	9.37E-07
AK076567	Adult male testis cDNA, RIKEN full-length enriched library, clone:4921513 01 product: unclassifiable, full insert sequence	AK076567	5.54169	4.56E-17
Kif17	Kinesin family member 17 (Kif17), mRNA	NM_010623	5.53068	7.65E-13
Trip1	TRNA phosphotransferase 1 (Trip1), mRNA	NM_153597	5.52301	1.26E-44
C030032O16Rik	Putative homeodomain transcription factor 1 (Phf1), mRNA	AK021115	5.52287	0.00004
NAP050738_1	Unknown		5.51793	0.00143
Slc40a1	Solute carrier family 40 (iron-regulated transporter), member 1, mRNA (cDNA clone MGC:6489 IMAGE:2647365)	NM_016917	5.51526	5.26E-10
Mll3	Mixed-lineage leukemia 3 protein (Mll3)	XM_355579	5.51391	1.75E-19
Ablm3	Actin binding LIM protein family, member 3, mRNA (cDNA clone MGC:106450 IMAGE:30534236)	NM_198649	5.51387	4.79E-12
Dmxl1	Dmx-like 1 , mRNA (cDNA clone MGC:28386 IMAGE:4022096)	AK082851	5.51375	9.31E-09
Hivep3	Clone 5'RACE1 ZAS3 (Krc) mRNA, 5' UTR	AK013707	5.51275	3.18E-26
Fhl2	Four and a half LIM domains 2, mRNA (cDNA clone MGC:29060 IMAGE:5066565)	AK081770	5.51184	0.00028
Arl5b	ADP-ribosylation factor-like 8 (Arl8), mRNA	NM_029466	5.50628	6.74E-06
Usp53	Ubiquitin specific peptidase 53, mRNA (cDNA clone IMAGE:4236151)	AK030317	5.5048	6.73E-16
Eaf2	Testosterone regulated apoptosis inducer and tumor suppressor (Trats)	NM_134111	5.49779	6.28E-07
Lmbr1	Limb region 1, mRNA (cDNA clone MGC:28737 IMAGE:4481088)	AK030631	5.49689	1.41E-08
F730023N20	hypothetical protein F730023N20	NM_183158	5.48167	0.00469
Vamp1	Vesicle-associated membrane protein 1 (Vamp1), mRNA	NM_009496	5.47901	7.04E-22
Abcc10	ATP-binding cassette, sub-family C (CFTR/MRP), member 10 (Abcc10), transcript variant mtp7B, mRNA	NM_145140	5.47864	1.39E-10
BG080473	Transcribed locus	BG080473	5.47538	0.00524
Ppp1r9a	Protein phosphatase 1, regulatory (inhibitor) subunit 9A, mRNA (cDNA clone MGC:59493 IMAGE:6331919)	NM_181595	5.47417	4.82E-07
TC1012618	RGS2_MOUSE Regulator of G-protein signaling 2 (RGS2). [Mouse] {Mus musculus}, partial (43%) [TC1012618]		5.46503	6.76E-10
Smarcad1	MRNA of enhancer-trap locus 1	AK088163	5.4628	3.56E-06
Malat1	Adult male stomach cDNA, RIKEN full-length enriched library, clone:2210407K09 product: receptor (calcitonin) activity modifying protein 2, full insert sequence	BC004722	5.46155	1.11E-09
Btg2	B-cell translocation gene 2, anti-proliferative (Btg2), mRNA	NM_007570	5.46006	1.64E-08
Malat1	Adult male stomach cDNA, RIKEN full-length enriched library, clone:2210407K09 product: receptor (calcitonin) activity modifying protein 2, full insert sequence	AK090111	5.45534	2.16E-21
Kcnk7	Dpkch3 mRNA for double-pore K channel 3	AF110521	5.45419	0.00021
XM_358570	Mus musculus LOC381415 (LOC381415), mRNA [XM_358570]	XM_358570	5.4508	0.00001
Thrc15	Trinucleotide repeat containing 15 (Thrc15), mRNA	AK034426	5.44852	9.38E-14
D16H22S680E	DNA segment, Chr 16, human D22S680E, expressed (D16H22S680E), mRNA	NM_138583	5.4478	6.43E-27

Primary Sequence Name	Sequence Description	Accession #	Fold Change	P-value
Cxxc5	CXXC finger 5 (Cxxc5), mRNA	NM_133687	5.44654	0.00002
Pbx4	Pre-B-cell leukemia transcription factor 4, mRNA (cDNA clone MGC:40990 IMAGE:1263363)	NM_030555	5.4461	4.76E-13
Gml1418	PREDICTED: similar to Ig kappa chain precursor V region - mouse [Mus musculus], mRNA sequence	J04610	5.44288	0.0003
Slc25a2	Mutant ornithine transporter 2 (Ornnt2)	AK077159	5.43766	3.03E-14
Hist3h2bb	Histone 3, H2bb (Hist3h2bb), mRNA	NM_206882	5.43583	1.97E-33
Ralgps2	Ral GEF with PH domain and SH3 binding motif 2 (Ralgps2), mRNA	NM_023884	5.43465	0.0001
Lao1	L-amino acid oxidase 1 (Lao1), mRNA	NM_133892	5.43168	0.00322
Hist1h2bm	Histone 1, H2bm (Hist1h2bm), mRNA	NM_178200	5.42961	1.25E-36
Zfp422-rs1	zinc finger protein 422, related sequence 1	AK020746	5.42824	3.08E-44
Spire1	Spire homolog 1 (Drosophila), mRNA (cDNA clone MGC:106458 IMAGE:30535423)	NM_176332	5.42537	9.41E-07
Matn3	Matrilin 3 (Matn3), mRNA	NM_010770	5.42402	0.00001
Zfp422-rs1	zinc finger protein 422, related sequence 1	NM_029952	5.42321	2.97E-17
Pcdh10	OL-protocadherin isoform (Pcdh10) mRNA, complete cds; alternatively spliced	AK122503	5.42181	5.94E-28
NAP042178-1	Unknown		5.41306	8.92E-21
Ranbp6	RAN binding protein 6 (Ranbp6), mRNA	AK083089	5.41102	0.00015
Myh3	PREDICTED: myosin, heavy polypeptide 3, skeletal muscle, embryonic [Mus musculus], mRNA sequence	XM_354614	5.39493	3.95E-11
Vill	Villin-like (Vill), mRNA	U72681	5.39006	1.44E-17
Ephb3	Eph receptor B3, mRNA (cDNA clone MGC:18409 IMAGE:3673003)	NM_010143	5.38235	1.15E-08
Xpr1	Xenotropic and polytropic murine retrovirus receptor (Xpr1)	NM_011273	5.38141	1.81E-13
Bank1	B-cell scaffold protein with ankyrin repeats 1 (Bank1), mRNA	AK041242	5.37887	0.00416
TC1066872	S3A1_HUMAN Splicing factor 3 subunit 1 (Spliceosome associated protein 114) (SAP 114) (SF3a120), [Human] [Homo sapiens], partial (3%) [TC1066872]		5.3751	0.00537

Pak3	P21-activated kinase 3 (pak3 gene)	NM_008778	5.22033	7.00E-06
0610008C08Rik	RIKEN cDNA 0610008C08 gene (0610008C08Rik), mRNA	AK029224	5.21977	0.00125
6330416L11Rik	RIKEN cDNA 6330416L11 gene (6330416L11Rik), mRNA	NM_027518	5.21346	3.01E-07
Homer1	Homer homolog 1 (Drosophila) (Homer1), transcript variant L, mRNA	AK035139	5.20561	0.00057
Armc8	Armadillo repeat containing 8, mRNA (cDNA clone MGC:47965 IMAGE:1230321)	AK078280	5.20529	6.30E-35
Lipg	Lipase, endothelial, mRNA (cDNA clone MGC:13719 IMAGE:3981856)	NM_010720	5.20391	0.00001
Dnahc2	Axonemal dynein heavy chain (partial, ID mdhc5)	Z83813	5.20226	0.00081
Cotl1	Coactosin-like 1 (Dictyostelium) (Cotl1), mRNA	NM_028071	5.20139	3.70E-07
2700050L05Rik	RIKEN cDNA 2700050L05 gene (2700050L05Rik), transcript variant 1, mRNA	NM_145995	5.19216	5.70E-15
Rab11fip4	MKIAA1821 protein	AK122559	5.19174	0.00128
Eml5	Echinoderm microtubule associated protein like 5, mRNA (cDNA clone IMAGE:4953665)	AK047762	5.19141	0.00003
Ptpn13	Protein tyrosine phosphatase, non-receptor type 13 (Ptpn13), mRNA	NM_011204	5.19002	1.54E-26
3-Mar	Membrane-associated ring finger (C3HC4) 3 (March3), mRNA	NM_177115	5.18876	3.33E-22
Sympo2	Adult male urinary bladder cDNA, RIKEN full-length enriched library, clone:9530006G20 product: unclassifiable, full insert sequence	AK035258	5.18793	9.93E-06
Zfp36	Zinc finger protein 36, mRNA (cDNA clone MGC:29129 IMAGE:5053664)	NM_011756	5.18672	4.78E-06
Epb4.115	Erythrocyte protein band 4.1-like 5 (Epb4.115), mRNA	NM_145506	5.18616	1.68E-43

Primary Sequence Name	Sequence Description	Accession #	Fold Change	P-value
Pip5k3	Phosphatidylinositol-3-phosphate/phosphatidylinositol 5-kinase, type III (Pip5k3), mRNA	NM_011086	5.18443	1.80E-10
Tec	Cytoplasmic tyrosine kinase, Dscr28C-related (Drosophila), mRNA (cDNA clone MGC:46873 IMAGE:5029430)	NM_013689	5.1779	7.22E-11
C130065N10Rik	PREDICTED: hypothetical protein XP_488897 [Mus musculus], mRNA sequence	AK048435	5.17772	1.71E-43
Pck2	PCTAIRE-motif protein kinase 2 (Pck2), mRNA	NM_146239	5.17294	1.41E-12
A130019P10Rik	Eukaryotic translation initiation factor 4E binding protein 2, mRNA (cDNA clone MGC:13950 IMAGE:4218820)	AK037456	5.17158	7.10E-27
C920006C10Rik	RIKEN cDNA C920006C10 gene (C920006C10Rik), mRNA	AK052176	5.17083	1.37E-21
Camkk1	Calcium/calmodulin-dependent protein kinase kinase 1, alpha, mRNA (cDNA clone MGC:27706 IMAGE:4924656)	NM_018883	5.17034	0.0001
<b>Tusc2</b>	<b>Tumor suppressor candidate 2 (Tusc2), mRNA</b>	<b>NM_019742</b>	<b>5.16901</b>	<b>1.18E-25</b>
AK048541	Mus musculus 16 days embryo head cDNA, RIKEN full-length enriched library, clone-C130071D07 product: ATPase, Cu++ transporting, alpha polypeptide, full insert sequence.	AK048541	5.16848	1.68E-13
Golph3	Mus musculus 10 days neonate skin cDNA, RIKEN full-length enriched library, clone:4733401N08 product; golgi phosphoprotein 3, full insert sequence.	AK014644	5.16802	3.09E-33
Fa2h	Fatty acid 2-hydroxylase, mRNA (cDNA clone IMAGE:4983638)	NM_178086	5.16055	2.45E-15
<b>Sesn3</b>	<b>Sestrin 3 (Sesn3), mRNA</b>	<b>NM_03261</b>	<b>5.15972</b>	<b>4.03E-09</b>
D030022P07Rik	RIKEN cDNA 4930451A13 gene, mRNA (cDNA clone MGC:25849 IMAGE:4194266)	AK045169	5.15849	2.37E-16
Spock2	Sparc/osteonectin, cwcv and kazal-like domains proteoglycan 2 (Spock2), mRNA	NM_052994	5.15198	5.72E-12
Elavl3	ELAV (embryonic lethal, abnormal vision, Drosophila)-like 3 (Hu antigen C) (Elavl3), mRNA	NM_010487	5.14832	3.61E-06
LOC620630	similar to Contactin 5 precursor (Neural recognition molecule NB-2)	XM_146640	5.14694	0.0002
Plxna3	Plexin A3 (Plxna3), mRNA	NM_008883	5.14348	1.78E-10
2200001115Rik	RIKEN cDNA 2200001115 gene (2200001115Rik), mRNA	NM_183278	5.12983	9.01E-11
Stt38l	Serine/threonine kinase 38 like, mRNA (cDNA clone MGC:70096 IMAGE:30135051)	NM_172734	5.12867	1.65E-13
NAP092202-001	Unknown		5.12151	9.54E-32
Dock4	MKI67 protein	AK049953	5.10798	0.0001
Nek1	Mus musculus 13 days embryo male testis cDNA, RIKEN full-length enriched library, clone:6030407P11 product: NIMA (never in mitosis gene a)-related expressed kinase 1, full insert sequence.	AK031330	5.1072	1.46E-15
Rgs2	Regulator of G-protein signaling 2, mRNA (cDNA clone MGC:361187 IMAGE:5365271)	NM_009061	5.10596	4.25E-10
Mapk8ip1	JNK interacting protein-1b (JIP-1b)	NM_011162	5.10563	1.85E-29
Pard6b	Par-6 (partitioning defective 6) homolog beta (C. elegans), mRNA (cDNA clone MGC:35871 IMAGE:2655658)	BC025147	5.1056	2.16E-21
H1f0	H1 histone family, member 0, mRNA (cDNA clone MGC:19309 IMAGE:4166167)	NM_008197	5.10476	2.71E-06
Dmp1	Dentin matrix protein 1 (Dmp1), mRNA	NM_016779	5.10461	0.0003
<b>Usf1</b>	<b>M.musculus USF1 (non-coding exon 1).</b>	<b>X95315</b>	<b>5.1015</b>	<b>0.00002</b>
2810453106Rik	RIKEN cDNA 2810453106 gene (2810453106Rik), mRNA	NM_026050	5.08664	2.86E-23
Ndrg3	N-myc downstream regulated gene 3, mRNA (cDNA clone MGC:21649 IMAGE:4500970)	NM_013865	5.08321	3.05E-26

Primary Sequence Name	Sequence Description	Accession #	Fold Change	P-value
2810013E07Rik	RIKEN cDNA 2810013E07 gene, mRNA (cDNA clone MGC:67555 IMAGE:6402150)	AK036255	5.08237	0.0059
6330406L22Rik	RIKEN cDNA 6330406L22 gene, mRNA (cDNA clone MGC:59510 IMAGE:6333971)	AK041380	5.07511	0.00009
Tubgcp5	Mus musculus 12 days embryo body between diaphragm region and neck cDNA, RIKEN full-length enriched library, clone:9430028E06 product: unclassifiable, full insert sequence.	AK034715	5.07129	0.00549
AK037544	Mus musculus 16 days neonate thymus cDNA, RIKEN full-length enriched library, clone:AK13024K02 product: hypothetical Proteinase inhibitor 14, serpin containing protein, full insert sequence.	AK037544	5.07051	5.67E-11
Creb3l3	CAMP responsive element binding protein 3-like 3 (Creb3l3), mRNA	NM_145365	5.06499	2.30E-13
Mfap3l	Microfibrillar-associated protein 3-like, mRNA (cDNA clone MGC:106286 IMAGE:5025281)	AK122332	5.0638	0.00006
Ddah2	Dimethylarginine dimethylaminohydrolase 2, mRNA (cDNA clone MGC:5866 IMAGE:3158175)	NM_016765	5.06334	6.63E-30
Il1rap	Interleukin 1 receptor accessory protein (Il1rap), transcript variant 2, mRNA	NM_134103	5.06296	4.72E-21
Cox7a1	Cytochrome c oxidase, subunit VIIa 1 (Cox7a1), mRNA	NM_009944	5.06261	3.37E-27
Unc13a	Glycosyltransferase 25 domain containing 1 (Gtf25d1), mRNA	AK083196	5.06174	6.78E-08
Mdm1	Transformed mouse 3T3 cell double minute 1 (Mdm1), transcript variant 2, mRNA	NM_148922	5.0613	3.82E-13
Flywch1	FLYYWCH-type zinc finger 1 (Flywch1), mRNA	BC025645	5.06097	8.55E-16
2410116G06Rik	RIKEN cDNA 2410116G06 gene (2410116G06Rik), mRNA	NM_026630	5.05623	7.14E-06
AK087708	Mus musculus 2 days pregnant adult female ovary cDNA, RIKEN full-length enriched library, clone:E33009M13 product: unclassifiable, full insert sequence.	AK087708	5.05545	0.00228
Hist1h2bk	Histone 1, H2Bk (Hist1h2bk), mRNA	NM_175665	5.0523	1.47E-33
Dffa	DNA fragmentation factor, alpha subunit (Dffa), transcript variant 2, mRNA	NM_010044	5.05211	4.21E-08
Gpr155	G protein-coupled receptor 155, mRNA (cDNA clone IMAGE:4167684)	AY255660	5.05096	5.00E-13
Ctnn3	Contactin 3 (Ctnn3), mRNA	NM_008779	5.05051	8.40E-08
Tprc6	Transient receptor potential cation channel, subfamily C, member 6 (Trpc6), mRNA	NM_013838	5.04168	0.00005
Xpr1	Xenotropic and polytropic murine retrovirus receptor (Xpr1)	AK047436	5.0407	5.27E-29
BC052046	CDNA sequence BC052046 (BC052046), mRNA	NM_183177	5.03591	1.47E-06
Scnn1g	Sodium channel, nonvoltage-gated 1 gamma, mRNA (cDNA clone MGC:29058 IMAGE:5042876)	NM_011326	5.0338	0.00021
Rab11fip1	MFLJ00294 protein	AK008412	5.03263	6.56E-16
Zfpml1	Zinc finger protein, multifype 1 (Zfpml1), mRNA	NM_009569	5.02713	4.89E-09
Serpinb1c	Serine (or cysteine) peptidase inhibitor, clade B, member 1c (Serpib1c), mRNA	NM_173051	5.02704	1.26E-06
Abim3	Actin binding LIM protein family, member 3, mRNA (cDNA clone MGC:106450 IMAGE:30534236)	NM_198649	5.01635	0.00514
Hic2	Hypermethylated in cancer 2 protein (Hic2)	NM_178922	5.01624	5.56E-27
Vkorc1	Vitamin K epoxide reductase complex, subunit 1, mRNA (cDNA clone MGC:25747 IMAGE:3991412)	NM_178600	5.01352	1.91E-06
3-Mar	Membrane-associated ring finger (C3HC4) 3 (March3), mRNA	AK018160	5.01164	0.00268
Kcnhl1	Potassium voltage-gated channel, subfamily H (eag-related), member 1 (Kcnhl1), mRNA	NM_010600	5.00508	2.36E-08

Primary Sequence Name	Sequence Description	Accession #	Fold Change	P-value
Rab37	RAB37, member of RAS oncogene family (Rab37), mRNA	NM_021411	5.00277	1.08E-09
Hist3h2a	Histone 3, H2a, mRNA (cDNA clone MGC:70265 IMAGE:6493838)	NM_178218	5.00243	0.00002
Atp6v1b2	ATPase, H <sup>+</sup> transporting, V1 subunit B, isoform 2, mRNA (cDNA clone MGC:21587 IMAGE:4500843)	BB633273	5.00183	2.44E-07

**Table V**

Confirmed/Putative TSGs identified in our screen that contain CpG islands in both human and mouse forms of the gene.

Gene	CpG Island M/H	RT-PCR*	MSP** M/H
<i>Tspan33</i>	+/-	+	-/-
