

Correction

M. C. Willing, D. H. Cohn, and P. H. Byers.

The Journal of Clinical Investigation, Volume 85, No. 1, January 1990.

Page 286.

Due to a production error the legend to Fig. 6 was printed incorrectly. The correct legend appears below.

Figure 6. Short-pulse experiments. Dermal fibroblasts from normal (II-3) and affected family members (only III-1 is shown here) were labeled with [³H]proline for periods of 5–15 min. The band that migrates above pro α (I) is pro α (III) (see Fig. 8 C).
