Key indicators: single-crystal X-ray study; $T = 100\text{ K}$; mean $\sigma(\text{C}-\text{C}) = 0.001\text{ \AA}$; R factor = 0.039; wR factor = 0.114; data-to-parameter ratio = 20.4.

In the title *N*-substituted benzimidazol-2-one, $\text{C}_{10}\text{H}_{10}\text{N}_2\text{O}$, the fused ring system is almost planar (r.m.s. deviation = 0.01 \AA) and aligned at $57.9(1)^\circ$ with respect to the propenyl fragment. In the crystal, adjacent molecules are linked by pairs of $\text{N}-\text{H}\cdots\text{O}$ hydrogen bonds into inversion dimers.

Related literature

For the transformation of 1-isopropenyl-1,3-benzimidazol-2-one to other biologically-active compounds, see: Lahrissi *et al.* (2010); Li *et al.* (2010). A shorter heating time in the synthesis leads to the formation of 4-methyl-2,3-dihydro-1*H*-1,5-benzodiazepin-2-one; see: Saber *et al.* (2010).

1-Isopropenyl-1*H*-1,3-benzimidazol-2(*H*)-one

A. Saber, H. Zouihri, E. M. Essassi and S. W. Ng

Comment

Benzimidazol-2-one derivatives possess a range of biological and pharmacological activities. Among the many compounds is *N*-isopropenyl benzimidazol-2-one, which can be further converted to 1-acyl-3-isopropenyl benzimidazol-2-ones that are active against *Botrytis cinerea* fungi that affect vegetables and fruits (Li *et al.* 2010). The reagent is also commercially available. We have recently reported the use of this reagent in the synthesis of some glucose-substituted benzimidazol-2-ones (Lakhrissi *et al.*, 2010). For the purpose of understanding the chemistry of these compounds, the crystal structure of the reagent is determined in the present study.

In the molecule of $C_{10}H_{10}N_2O$ (Scheme I, Fig. 1), the fused-ring is planar (r.m.s. deviation 0.01 Å); the propenyl fragment is aligned at 57.9 (1) ° with respect to the fused-ring. Adjacent molecules are linked about a center-of-inversion by an N–H···O hydrogen bond.

Experimental

o-Phenylenediamine (1.0 g, 9 mmol) and ethyl acetoacetate (1.2 ml, 9 mmol) were heated in xylene (10 ml) for 6 hours. The mixture was set aside for the growth of colorless crystals of *N*-isopropenyl benzimidazol-2-one; yield 90%. When the heating time is shortened to 1 hour, the product is 4-methyl-2,3-dihydro-1*H*-1,5-benzodiazepin-2-one; details are given in another report (Saber *et al.*, 2010).

Refinement

Carbon-bound H-atoms were placed in calculated positions (C—H 0.95–0.98 Å) and were included in the refinement in the riding model approximation, with $U(H)$ set to 1.2–1.5 $U_{eq}(C)$.

The amino H-atom was located in a difference Fourier map; the N–H distance was restrained to 0.86±0.01 Å. T; the temperature factor of the amino hydrogen atom was freely refined.

Figures

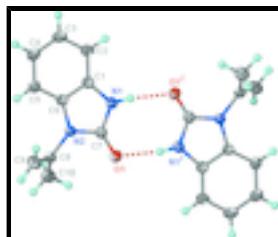

Fig. 1. Thermal ellipsoid plot (Barbour, 2001) of the molecule of $C_{10}H_{10}N_2O$ at the 70% probability level shown as a hydrogen-bonded dimer; hydrogen atoms are drawn as spheres of arbitrary radius. Symmetry code: $i = 1 - x, 1 - y, 1 - z$.
