In this paper, we surveyed the medical directors of state, federal, and District of Columbia prison systems about their opinions and prescribing practices for methadone and buprenorphine. Our survey also included questions about prison policies related to referring prisoners to community-based opiate replacement therapy (ORT) programs upon release. A color-coded map was used to illustrate states' prescribing and referral policies (Fig. 1). The original map indicated that the District of Columbia offered only ORT referrals. We found in our survey, however, that the District of Columbia offered both ORT and ORT referrals and was thus mislabeled on the map as medium blue instead of dark blue. Below is the correct Fig. 1.
