

CORRIGENDA

The modifier of position-effect variegation *Suvar(3)7* of *Drosophila*: there are two alternative transcripts and seven scattered zinc fingers, each preceded by a tryptophan box

F.Cléard, M.Matsarskaia and P.Spierer

Nucleic Acids Res. (1995) **23**, 796–802.

The authors would like to acknowledge the contribution of Laurent Fasano, Veronique Garzino and Bernard Jacq, for having, in 1990, noted first in front of each zinc finger of the partial deduced sequence of *Suvar(3)7* (1), a tryptophan motif resembling the motif found in front of homeodomains. The authors regret this omission in their paper and apologize to these colleagues for not having given them proper credit.

1. Reuter,G., Giarre, M., Farah,J., Gausz,J., Spierer,A. and Spierer,P. (1990) *Nature* **344**, 219–223.

Inhibition of HIV-1 reverse transcription by triple-helix forming oligonucleotides with viral RNA

S.Volkman, J.Jendis, A.Frauendorf and K.Moelling

Nucleic Acids Res. (1995) **23**, 1204–1212.

The authors wish to note that Figure 2B which was published in the above paper is, in fact, a copy of Figure 5B. The correct Figure 2B is reproduced below.
