ERRATA

Mechanisms of Antiibotic Resistance Determined by Resistance-Transfer Factors

JOEL UNOWSKY AND MARTIN RACHMELER
Department of Microbiology, Northwestern University Medical School, Chicago, Illinois

Volume 92, no. 2, pages 361 and 362: Change the legends to Fig. 2, 3, 4, and 5 to read as follows.

FIG. 2. *Uptake of CM by CM-resistant cells, CSH-2-F⁻-fi⁺ (○), and sensitive cells, CSH-2-F⁻ (●).*

FIG. 3. *Uptake of TC by TC-resistant strains, CSH-2-F⁻-fi⁻ (▲), CSH-2-F⁻-fi⁺ (■), S. flexneri 2b-fi⁺ (○), and a TC-sensitive strain, CSH-2-F⁻ (●). TC-resistant strain CSH-2-F⁻-fi⁻ was preincubated in TC and then tested for TC uptake (□).*

FIG. 4. *Uptake of SM by str-s strains, CSH-2-F⁻ (●) and 15·51 (■), and str-r strains, CSH-2-F⁻-fi⁺ (○), CSH-2-F⁻-fi⁻ (△), W-677 (▲), and 15·49 (□).*

FIG. 5. *Effect of CM on SM uptake by an SM- and CM-sensitive strain, CSH-2-F⁻, and an SM- and CM-resistant strain, CSH-2-F⁻-fi⁺. Log-phase cultures were divided in half; to one portion was added 5 μg/ml of tritiated SM; to the other, 5 μg of tritiated SM plus 25 μg/ml of CM. The cultures were grown in nutrient broth on a shaker at 37 C; 1-ml samples were withdrawn, filtered, and washed and their radioactivity was counted. (○) SM uptake by CSH-2-F⁻; (●) SM uptake by CSH-2-F⁻ in presence of CM; (△) SM uptake by CSH-2-F⁻-fi⁺; (▲) SM uptake by CSH-2-F⁻-fi⁺ in the presence of CM.*

Effect of Bromouracil-containing Deoxyribonucleic Acid on *Bacillus subtilis*

DIXIE M. GIMLIN, SUE D. HARDMAN, BETTY N. KELLEY, GRACE C. BUTLER, AND FRANKLIN R. LEACH
Department of Biochemistry, Oklahoma State University, Stillwater, Oklahoma

Volume 92, no. 2, page 369, column 2: In the second line of the footnote to Table 3, change "75 μg per ml of DNA" to "2.5 μg per ml of DNA."

Relation of Polysaccharide Content to Some Biological Properties of Endotoxins from Mutants of *Salmonella typhimurium*

R. W. I. KESSEL, HENRY H. FREEDMAN, AND WERNER BRAUN
Institute of Microbiology, Rutgers, The State University, New Brunswick, New Jersey

Volume 92, no. 3, page 594: Add to legend of Fig. 2, "Triangles, white circles, and black circles indicate data from separate experiments. The abscissa indicates endotoxin dose in μg/mouse."
