EMBL accession no. X15512

The cDNA encoding apolipoprotein C-I of the Sprague-Dawley rat was isolated from a liver cDNA library in lambda gt10. Comparison with the human apolipoprotein C-I cDNA (1) indicated a 5' untranslated region of 83 bp, a coding region of 267 bp, a 3' untranslated region of 111 bp, and a 26 base poly(A) tract (Fig. 1). The derived amino acid composition matched well with that of rat apolipoprotein C-I reported earlier (2).
