DOI 10.1074/jbc.A111.285205

**Inhibitor of  $\kappa$ B kinase  $\epsilon$  (IKK $\epsilon$ ), STAT1, and IFIT2 proteins define novel innate immune effector pathway against West Nile virus infection.**

Olivia Perwitasari, Hyelim Cho, Michael S. Diamond, and Michael Gale, Jr.

PAGE 44413:

The source of IFIT2<sup>-/-</sup> mouse embryo fibroblasts (MEFs) was inadvertently left out in the original manuscript. IFIT2<sup>-/-</sup> MEFs were generated by the laboratory of Dr. Ganes Sen (Cleveland Clinic) and were a gift to Dr. Michael Diamond.

Authors are urged to introduce these corrections into any reprints they distribute. Secondary (abstract) services are urged to carry notice of these corrections as prominently as they carried the original abstracts.
