# Chromosome differentiation patterns during cichlid fish evolution

Andréia B Poletto<sup>1</sup>, Irani A Ferreira<sup>1</sup>, Diogo C Cabral-de-Mello<sup>1</sup>, Rafael T Nakajima<sup>1</sup>, Juliana Mazzuchelli<sup>1</sup>, Heraldo B Ribeiro<sup>1</sup>, Paulo C Venere<sup>2</sup>, Mauro Nirchio<sup>3</sup>, Thomas D Kocher<sup>4</sup> and Cesar Martins<sup>1\*</sup>

## Correction

After the publication of our work [1], we detected that one of the species analyzed in the study, *Astatotilapia latifasciata* (Figure 1), was erroneously identified as *Haplochromis obliquidens*. This species was described as *Haplochromis latifasciatus* [2] and later ascribed to the genus *Astatotilapia* [3]. Our mistake comes from the fact that this species is also frequently listed as *Haplochromis "zebra obliquidens"* in the aquarium trade. *Astatotilapia latifasciata* has been reported to occur in Lake Nawampasa a small satellite lake of the much larger Lake Kyoga, and in Lake Kyoga located north of Lake Victoria in Uganda [3].
