Inhibition of *Neisseria gonorrhoeae* Epithelial Cell Interactions by Vaginal *Lactobacillus* Species

Rachel R. Spurbeck and Cindy Grove Arvidson

Department of Microbiology and Molecular Genetics, Genetics Program, and Center for Microbial Pathogenesis, Michigan State University, East Lansing, Michigan

Volume 76, no. 7, p. 3124–3130, 2008. *Lactobacillus jensenii* 25258 should read *Lactobacillus gasseri* 33323.

In the course of recent studies we have determined that what our laboratory has reported as *Lactobacillus jensenii* 25258 is in fact *L. gasseri* 33323. This was determined by sequencing the 16S rDNA from all of the *Lactobacillus* strains in our collection. The fact that our strain is actually *L. gasseri* 33323 does not change any of the conclusions as the results reported for *L. gasseri* 33323 were not significantly different from those reported as for *L. jensenii* 25258. Future experiments by our group will refer to this organism as *L. gasseri* 33323. We sincerely apologize to all our colleagues for any difficulties or confusion arising from this unfortunate error.
