

Correction. In the article " β -Endorphin: Characteristics of binding sites in a neuroblastoma-glioma hybrid cell" by R. Glenn Hammonds, Jr., Pascual Ferrara, and Choh Hao Li, which appeared in the April 1981 issue of *Proc. Natl. Acad. Sci. USA* (78, 2218-2220), the authors request that the following be noted. In Fig. 2, the y -axis label should read " $\ln[(RH_{\infty} - RH)/(R_i \cdot H_i - RH_{\infty} \cdot RH)]$ " rather than " $\ln[RH_{\infty}(K_d + H_T - RH_{\infty})/(H_T - RH_{\infty})]$."

Correction. In the article "Gallopinduced by pontine tegmentum damage in rats: A form of 'Parkinsonian festination' not blocked by haloperidol" by J.-T. Cheng, T. Schallert, M. De Ryck, and P. Teitelbaum, which appeared in the May 1981 issue of *Proc. Natl. Acad. Sci. USA* (78, 3279-3283), Fig. 2 (p. 3281) showed a distance scale that was incorrect. The correct figure is printed here.

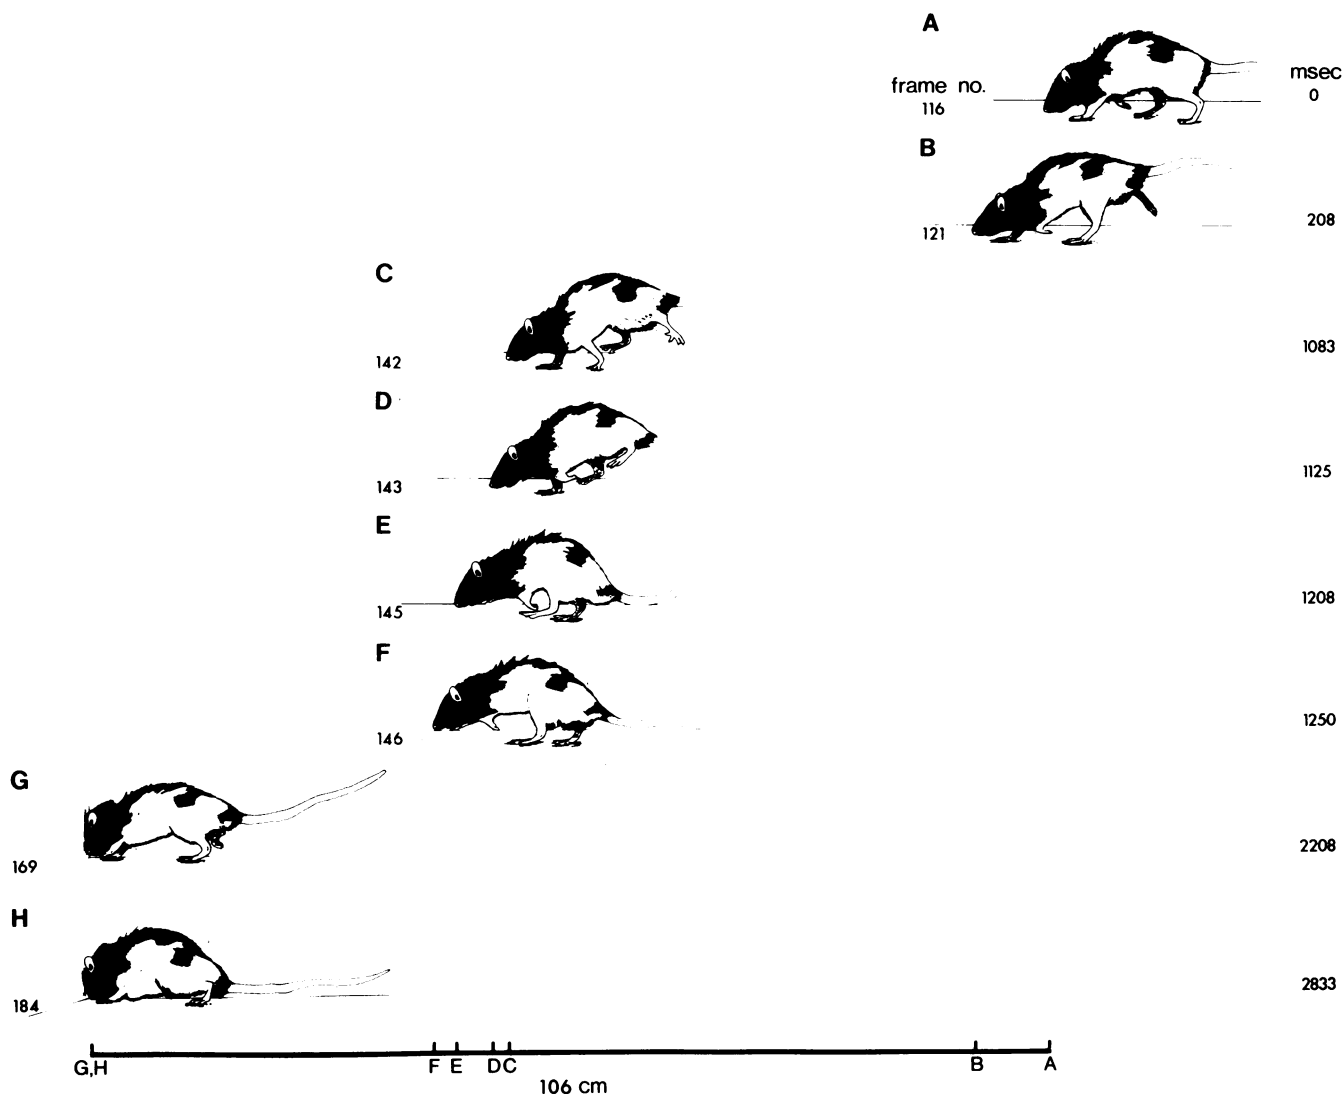

FIG. 2. Accelerating gait and shutdown of locomotion by snout contact after NRTP damage. This figure, made from tracings of individual movie frames, shows the accelerated forward locomotion of an NRTP-lesioned rat (no. 18). It walked (A), then ran (B), then galloped (C, D, E, F) headlong into a wall (G, H). The number below each picture indicates the frame number (this sequence was filmed at 24 frames per sec). The distance scale is indicated in the horizontal bar. The numbers on the right side refer to the time scale (msec).
