#### Page 98 - Summary

Small size and good preoperative good correlated with good short- and long-term hearing.

Small size and good preoperative hearing correlated with good short- and long-term hearing.

#### Page 98 - Introduction

The several reports on the stability of preserved hearing with widely divergent rates. Shelton et al.<sup>1</sup> significant long-term decline of hearing after middle cranial fossa approach in 56% of patients.

The several reports on the stability of preserved hearing show widely divergent rates. Shelton et al.<sup>1</sup> report significant long-term decline of hearing after middle cranial fossa approach in 56% of patients.

#### Pages 99-100 - Results

The 107 cases with a 10 mm tumour and class A or B hearing remained in class A or B in 49 cases (33%) in the short-term and in 42 cases (27%) in the long-term.

The 117 cases with a 10 mm tumour and class A or B hearing remained in class A or B in 39 cases (33%) in the short-term and in 32 cases (27%) in the long-term.

#### Page 100 - Results

The change of class change was less in the A-B classes (8/54, 15%) or 9/54 (17%) if the lost case is included.

The rate of change of class was less in the A-B classes (8/54, 15%) or 9/54 (17%) if the lost case is included.

#### Page 101 - Discussion

The preservation of class in A or B class was 44% in the short-term and 40% in the long-term.

The preservation of class A in class A or B was 44% in the short-term and 40% in the long-term.
