Insulin-Activated Protein Kinase C β Bypasses Ras and Stimulates Mitogen-Activated Protein Kinase Activity and Cell Proliferation in Muscle Cells

Pietro Formisano, Francesco Oriente, Francesca Fiory, Matilde Caruso, Claudia Miele, Maria Alessandra Maitan, Francesco Andreozzi, Giovanni Vigliotta, Gerolama Condorelli, Francesco Beguinot

Dipartimento di Biologia e Patologia Cellulare e Molecolare and Centro di Endocrinologia ed Oncologia Sperimentale del CNR, Università di Napoli Federico II, Naples, Italy

Volume 20, no. 17, p. 6323–6333, 2000. Page 6327, Fig. 3: The autoradiograph marked PKC β erroneously contains a blot corresponding to a β -actin control. The correct PKC β autoradiograph is shown below. The overall interpretation of the results is not changed.
