

## Erratum

### Endocytosis and recycling of the fibronectin receptor in CHO cells

by Mark S. Bretscher

*The EMBO Journal*, 5, 1341–1348, 1989.

In the above paper a line was misplaced in the final paragraph of the results during the printing process. The correct paragraph is reprinted below.

The kinetics of endocytosis (from Figure 3) and exocytosis (from Figure 5) are shown in Figure 6. The initial rate of endocytosis shows that a fibronectin receptor spends an average of 70 min on the cell surface between rounds of endocytosis which, together with a 10-min transit time through the cell, gives a cycling time of once each 80 min.
