

Correction

2010. L. Janosi and A.A. Gorfe. **Segregation of Negatively Charged Phospholipids by the Polycationic and Farnesylated Membrane Anchor of Kras.** *Biophys. J.* 99:3666–3674

References to Lysine 5 and 6 were swapped and should be corrected as follows:

Figure 6: in the label, K6 should read K5. In the legend, Lys⁶ should read Lys⁵.

On page 3671, column 2, Lys⁶ should read Lys⁵ and Lys⁵ should read Lys⁶.

On page 3671, column 2, the second sentence should read as follows:

A striking result is that, apart from the sporadic hydrogen bonding of Lys⁸ and Lys¹⁰ with POPC (top panel), the vast majority of the Lys side chains (residues 3, 4, 5, 8, and 10; middle panel) interact with POPG.

On page 3672, column 1, the second phrase should read as follows:

‘Yet, our results clearly show that on average only five of the eight lysine residues (excluding 1, 2, and 6) directly interact with the POPG headgroups.’
