Correction: Beta- Lactam Antibiotics Stimulate Biofilm Formation in Non-Typeable *Haemophilus influenzae* by Up-Regulating Carbohydrate Metabolism

The *PLOS ONE* Staff

There is an error in Table 1. The header on the second half of the table reads “Upregulated Genes” and it should read “Downregulated Genes.” The authors have provided the corrected table below.

Genes that were either up or down regulated (≥ 1.5 -fold plus $P \leq 0.05$, T-test and FDR ≤ 0.05) when biofilms were formed in the presence of 170 ng/mL ampicillin are listed. Eight genes were up-regulated and 51 were down-regulated. Of the eight up-regulated genes, 5 were involved in carbohydrate metabolism and were enzymes involved in glycogen processing. The down-regulated genes were involved in a wide range of metabolic processes and 18 genes were unannotated (hypothetical). doi:10.1371/journal.pone.0099204.t001
