

CORRIGENDUM

Comprehensive search for HNF-1 β -regulated genes in mouse hepatoma cells perturbed by transcription regulatory factor-targeted RNAi

Taku Tanaka, Yasuhiro Tomaru, Yuki Nomura, Hisashi Miura, Masanori Suzuki and Yoshihide Hayashizaki

Nucleic Acids Res. (2004) **32**, 2740–2750.

The authors would like to apologize for an error that has appeared in Table 1. We had to convert the log₂-ratios into expression folds as the values for upregulated genes as described below. The last sentence in the footnote of Table 1 should be then corrected as follows: each value (expression fold) is an average of the data obtained in two independent experiments.

Upregulated gene	Fold error	Correct
Serine protease inhibitor 14	1.19	2.28
mutS homolog 3	1.16	2.23
Homolog to SCHIP-1	1.14	2.20
Prolactin-like protein C-gamma	1.13	2.19
Similar to pregnancy-specific glycoprotein 23	1.12	2.17
Peroxisomal biogenesis factor 3	1.11	2.16
Similar to flavin-containing monooxygenase 2	1.09	2.13
RAB9, member RAS oncogene family (Rab9)	1.09	2.13
