Cyclooxygenase-2-derived prostaglandin E₂ promotes human cholangiocarcinoma cell growth and invasion through EP₁ receptor-mediated activation of the epidermal growth factor receptor and Akt.

Chang Han and Tong Wu

This article has been retracted by the publisher. An investigation at the University of Pittsburgh found that the EGFR bands in Fig. 2 appeared to be similar to the Akt bands in Fig. 4, and the blots in Fig. 8C were used to represent the results of a different experiment in Fig. 9B of a different article: Han, C., Demetris, A. J., Stolz, D. B., Xu, L., Lim, K., and Wu, T. (2006) Modulation of Stat3 activation by the cytosolic phospholipase A2 α and cyclooxygenase-2-controlled prostaglandin E2 signaling pathway. *J. Biol. Chem.* **281**, 24831–24846.

Authors are urged to introduce these corrections into any reprints they distribute. Secondary (abstract) services are urged to carry notice of these corrections as prominently as they carried the original abstracts.
