

CORRECTION

# Correction: Katanin Localization Requires Triplet Microtubules in *Chlamydomonas reinhardtii*

Jessica M. Esparza, Eileen O'Toole, Linya Li, Thomas H. Giddings Jr, Benjamin Kozak, Alison J. Albee, Susan K. Dutcher

The authors would like to correct [Fig 1](#), as errors were introduced in the preparation of this figure for publication. In [Fig 1B](#), the *bld2-6; BLD2* panel and the *pf15-1; PF15HA* panel are duplicates. The authors regrew the cell cultures in these panels, as well as the parental strains shown in the same panels of [Fig 1A](#), and they have provided a corrected version of [Fig 1](#) here.

**Fig 1. Basal body mutant strains show supersensitivity to Taxol.** (A) Serial dilution of mutant, rescued, and intragenic revertant strains on control medium and (B) 8  $\mu$ M Taxol-containing medium. Phase images of cells on media with different Taxol concentrations. (C, G) Wild-type, (D, H) *pf15-1*, (E, I) *bld2-6* and (F, J) *bld2-6, pf15-1* double mutant on 10  $\mu$ M (C–F) or 6  $\mu$ M Taxol (G–J) containing medium. The *bld2-6, pf15-1* double mutant is unable to grow on 6  $\mu$ M Taxol containing medium compared to the single mutant strains. Scale bar in Panel C equals 10  $\mu$ m. Panels C–J are at the same magnification.

doi:10.1371/journal.pone.0145569.g001

The authors confirm that these changes do not alter their findings. The authors have provided the underlying images as Supporting Information.

### Supporting Information

**S1 Fig. Underlying data.** Serial dilutions of mutant and rescued strains for *bld2-6; BLD2*; *bld2-6* and *pf15; PF15::HA* on control medium (A) and 8  $\mu$ M Taxol-containing medium (B). (TIF)
