

CORRIGENDUM

doi: 10.14814/phy2.12680

In Liem et al. 2015, the following errors were published in the Results, Discussion sections:

In the Results (paragraph 7) and Discussion (paragraph 5) sections, “higher age” and “higher BMI” should have been “lower age” and “lower BMI”.

In paragraph 5 of the Discussion section, the following statement, “However, the inverse relationship between age and lower peak VO₂ in our participants with SCA may reflect the cumulative impact of disease-related factors on fitness with age.” should have been inserted after the statement that currently reads, “The developmental aspects of peak VO₂ are also known to track with physical growth, pubertal maturation and increases in skeletal mass with age (Davies et al. 1972; Krahenbuhl et al. 1985; Armstrong et al. 1991).”

The authors apologise for the errors.
