**3-Formylchromone interacts with cysteine 38 in p65 protein and with cysteine 179 in I $\kappa$ B $\alpha$  kinase, leading to down-regulation of nuclear factor- $\kappa$ B (NF- $\kappa$ B)-regulated gene products and sensitization of tumor cells.**

Vivek R. Yadav, Sahdeo Prasad, Subash C. Gupta, Bokyoung Sung, Sharangdhar S. Phatak, Shuxing Zhang, and Bharat B. Aggarwal

This article has been retracted by the publisher. An investigation at MD Anderson determined that images were used to represent different experimental conditions. Specifically, the IKK $\alpha$  immunoblot from Fig. 2G was flipped horizontally and reused as the IKK $\beta$  immunoblot in Fig. 2H, and the IKK $\beta$  immunoblot in Fig. 2G was flipped horizontally and reused as the IKK $\alpha$  immunoblot in Fig. 2H.

Authors are urged to introduce these corrections into any reprints they distribute. Secondary (abstract) services are urged to carry notice of these corrections as prominently as they carried the original abstracts.
