## The transcription factor SPDEF suppresses prostate tumor metastasis.

Joshua J. Steffan, Sweaty Koul, Randall B. Meacham, and Hari K. Koul

The GAPDH band shown from VC-Luc cells in Fig. 4B appeared to be duplicated in the GAPDH panel in Fig. 5F. Because the authors no longer had the original data for Fig. 4B, this experiment was repeated in three independent experiments. Data are presented as a representative image. In Fig. 6, the two lanes of GAPDH corresponding to cultured cell lysates and the two lanes of GAPDH corresponding to *in vivo* tumor cell lysates were inadvertently switched during the production and analysis process. The GAPDH bands were placed to correctly correspond to their respective experimental representation. Following this correction, the densitometry analysis was reran comparing the 9 mRNAs in Fig. 6 with the correct GAPDH bands using ImageJ software as described originally. Statistical analysis was performed as described in the original manuscript. These corrections do not affect the interpretation of the results or the conclusions of the original paper.
