Correction

Correction to 'Proto-cooperation: group hunting sailfish improve hunting success by alternating attacks on grouping prey'

James E. Herbert-Read, Pawel Romanczuk, Stefan Krause, Daniel Strömbom, Pierre Couillaud, Paolo Domenici, Ralf H. J. M. Kurvers, Stefano Marras, John F. Steffensen, Alexander D. M. Wilson and Jens Krause

There was a mismatch between the units reported for the base metabolic rate, c_0, in figure 3c in [1] and the corresponding units in the main text and labels of figure 3a,b. Instead of the rate c_0 being shown in 1 per hour, the label of the x-axis in figure 1c was given in 1 per second. The corrected figure is shown below. None of the findings of the paper have altered.

Figure 3. (a,b) Relative energy payoff difference Δf versus hunter group size N for different attack delay times T_{fr} with $c_0 = 0.0001$ s$^{-1} = 0.36$ h^{-1} and different values of the relative energetic costs of attacks $\delta_c = 100$ (a) and $\delta_c = 500$ (b). (c) Relative energy payoff difference Δf versus c_0 and δ_c for fixed $T_{fr} = 0.5$ h and $N = 10$ (blue region indicates $\Delta f < 0$; i.e. where free riding is not beneficial). All other simulation parameters as in the main text and electronic supplementary material, S2.4 of [1].
