DOI 10.1074/jbc.A116.732479

Direct functional interaction of the kinesin-13 family member kinesin-like protein 2A (Kif2A) and Arf GAP with GTP-binding protein-like, ankyrin repeats and PH domains 1 (AGAP1).

Ruibai Luo, Pei-Wen Chen, Michael Wagenbach, Xiaoying Jian, Lisa Jenkins, Linda Wordeman, and Paul A. Randazzo

There was an error in the title. “Membrane” should instead read as “member.” The correct title appears above.

Authors are urged to introduce these corrections into any reprints they distribute. Secondary (abstract) services are urged to carry notice of these corrections as prominently as they carried the original abstracts.
