NAD(P)H:quinone oxidoreductase 1 (NQO1) competes with 20S proteasome for binding with C/EBP α leading to its stabilization and protection against radiation-induced myeloproliferative disease.

Junkang Xu and Anil K. Jaiswal

This article has been retracted by the publisher. An investigation at the University of Maryland, Baltimore determined that the data shown in Fig. 2A are unreliable and do not support the hypothesis of this work.

Authors are urged to introduce these corrections into any reprints they distribute. Secondary (abstract) services are urged to carry notice of these corrections as prominently as they carried the original abstracts.
