

CORRECTION

# Correction: A Comparison of Four-Year Health Outcomes following Combat Amputation and Limb Salvage

Ted Melcer, Jay Walker, Vibha Bhatnagar, Erin Richard, V. Franklin Sechriest II, Michael Galarneau

There is an error in the last sentence of the Results section. The correct sentence is: Although PTSD was not significantly associated with injury group in the overall models, early amputation had a statistically significant (Odds ratio = 0.39 [95% confidence interval: 0.15–0.97]) reduction in the likelihood of PTSD relative to limb salvage only during the first year after injury.
