Stimulation of inducible nitric oxide by hepatitis B virus transactivator protein-HBx requires MTA1 coregulator.

Tri M. Bui-Nguyen, Suresh B. Pakala, Divijendranatha Reddy Sirigiri, Emil Martin, Ferid Murad, and Rakesh Kumar

This article has been withdrawn by the authors. Upon becoming aware of concerns raised regarding errors with respect to Fig. 3*B*, the authors are withdrawing the paper and apologize for these errors. The senior author states that the experiments and the final assembly of Fig. 3*B* were performed by specific co-authors from his laboratory. The authors state that the potential issues raised with Fig. 3*B* do not affect the scientific conclusions of this work.

Authors are urged to introduce these corrections into any reprints they distribute. Secondary (abstract) services are urged to carry notice of these corrections as prominently as they carried the original abstracts.
