

Erratum

Human immunodeficiency virus infection of cells arrested in the cell cycle

by Paul Lewis, Michelle Hensel and Michael Emerman

The EMBO Journal, 11, 3053–3058, 1992.

Due to incorrect transfer of labels and rearrangement of the panels in Figure 1, the published figure was misleading and did not correctly reflect the authors' interpretations. The correct figure is shown below.

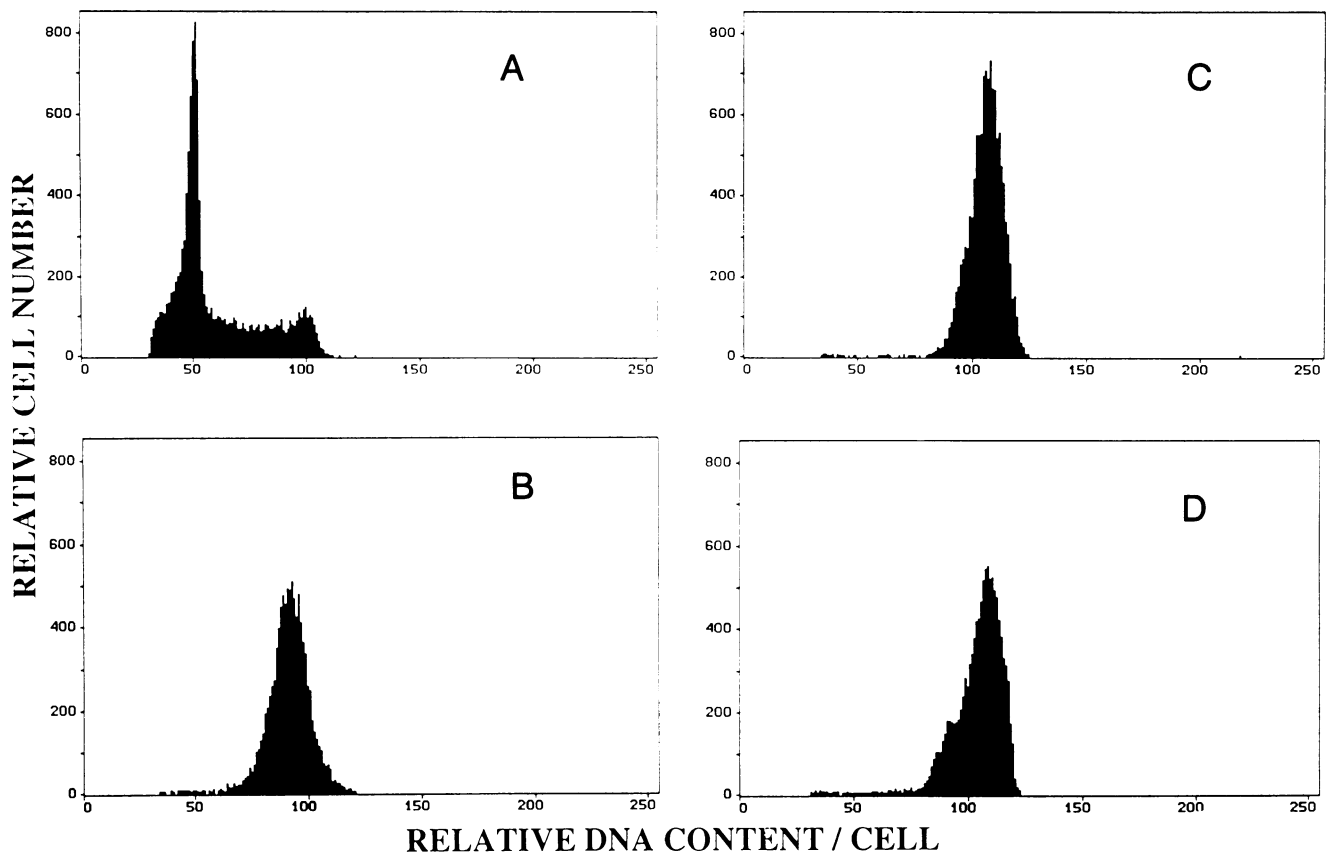

Fig. 1. Cell cycle analysis of proliferating and γ -irradiated HeLa CD4-LTR/ β -gal cells. The abscissa is the relative DNA content per cell, while the ordinate is the cell number. (A) Logarithmically growing cells; (B) cells 24 h after exposure to 4000 rads; (C) 48 h after exposure to 4000 rads; (D) 72 h after exposure to 4000 rads.
