

## Erratum: “Estimated Changes in Life Expectancy and Adult Mortality Resulting from Declining PM<sub>2.5</sub> Exposures in the Contiguous United States: 1980–2010”

Neal Fann, Sun-Young Kim, Casey Olives, and Lianne Sheppard

Environ Health Perspect 125(9):097003; <https://doi.org/10.1289/EHP507>

In [Figure 1](#), the key to the color gradations (“Percentage of deaths attributable to PM<sub>2.5</sub>”) was omitted. It is included in the figure reproduced here.

*EHP* regrets the error.

**Figure 1.** The fraction of total all-cause deaths attributable to PM<sub>2.5</sub> in U.S. counties in the years 1980, 1990, 2000, and 2010 among adults ages 30 and older (calculated using risk coefficient from Krewski et al. 2009). State and county boundaries for each year drawn according to Census Topologically Integrated Geographic Encoding and Referencing (TIGER)/Line files as reported by the Minnesota Population Center National Historical Geographic Information System (NHGIS Database) (<http://www.nhgis.org>).
